Foreword

We are trying to help you.

From the author writing this e-book to the individual who shared it with you — we are all simply trying to help you.

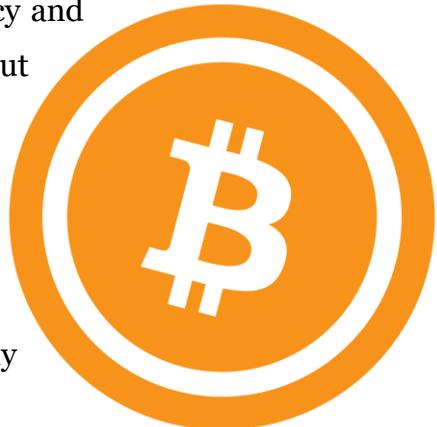

We genuinely believe that SPX6900 can improve the quality of your life.

That's why we share it with anyone willing to listen.

It Starts with Bitcoin

You may be new to cryptocurrency and know very little about it — but you've probably still heard of Bitcoin.

It's hard not to have heard of Bitcoin after its meteoric rise from mere cents in 2009 to nearly \$112,000 in May 2025.

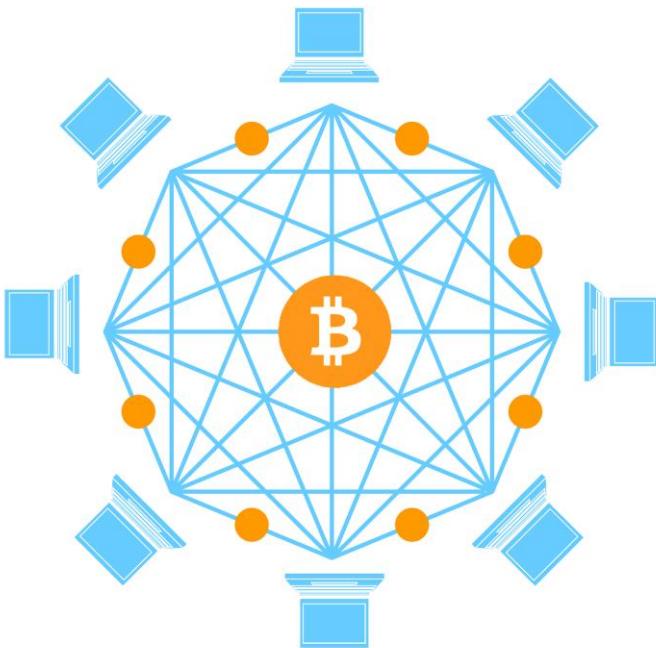

The First Crypto

Bitcoin was the first cryptocurrency, created by an anonymous developer known as Satoshi Nakamoto. He designed Bitcoin as an alternative, decentralised payment system and currency — one that central banks could not control or manipulate.

It was a way for people to send direct, peer-to-peer payments over the Bitcoin Network using bitcoin (BTC) as the currency

(Fig 1.1) — without any third party (i.e. bank) involved in the transaction.

(Fig 1.1 – Bitcoin Peer to Peer Network)

Satoshi Nakamoto was the first to solve the double-spending problem (i.e., preventing the same bitcoin from being spent more than once) in a trustless decentralised manner. This

made it possible for people to transact using BTC without needing a third party to finalize the transaction on the ledger.

Evolution of Bitcoin

Bitcoin began as a vision of digital cash — free from government and banking control — that people could use and spend as an alternative to fiat currency. This is why we have the infamous “[Bitcoin pizza](#)” story from its early days.

Over time, Bitcoin evolved into “digital gold” — a store of value, a hedge against inflation, and a portfolio diversification asset. Today, it’s gaining increased interest from institutions, hedge funds, and even nation-states.

Its journey from radical financial liberation to a mainstream store-of-value asset has only been possible because of the culture, conviction, and community that supported and stood by it with unwavering loyalty.

If no one had seen value in Satoshi’s creation, Bitcoin would be worthless today. But an early and growing community bought into the vision of a decentralised payment system and

currency, which ultimately evolved into a globally recognized store of value — still attracting new believers to this day.

Bitcoin, with its **fixed supply of 21 million coins** (or fewer due to people losing their tokens), grew from nothing to over a trillion-dollar market cap since its inception in 2009 (Fig 1.2) — all because of the people.

#	Coin	Price	24H	Market Cap ▾
1	BTC	\$108,663	▲ 0.7%	\$2,160,408,370,518

(Fig 1.2 – Bitcoins Marketcap on 8th July 2025)

So, Why Invest in Crypto?

The short and simple answer: because it has captured the attention of the people — and that attention is only growing stronger.

Some invest in crypto because they love the technology. Others do it to change their financial situation and be part of a community of like-minded individuals with a shared purpose.

Whatever your reason, the crypto market is only expanding (Fig 1.3), gaining strength, attracting more attention, and could drastically change your life — if you align with the right community at the right time.

(Fig 1.3 – Crypto Market Cap Growth Over time)

I believe SPX6900 is a second chance at a Bitcoin-like opportunity — as we'll soon discover why.

Crypto is an asset class that ordinary, hardworking people in 9-to-5 jobs can use to drastically change their lives. Yes, there is a small learning curve, but the time spent learning to invest in crypto is worth it.

Personally, I believe the best way to learn is by doing. That's how I learned about crypto when I was starting out — I just took action.

Remember, if you don't start taking action in some way to improve or better your life, 5 or 10 years from now you'll likely be in the same position — or worse — with the rise of AI and the ongoing monetary inflation and currency debasement. People need to earn more than the monetary inflation rate to avoid losing purchasing power, and the right cryptocurrency is an asset that can drastically outpace inflation, preserve your purchasing power, and change your life.

Taking small steps today by getting involved in a growing crypto space could drastically change your life 5 to 10 years from now — simply by doing what most people don't: **taking a calculated risk.**

What is SPX6900?

So, you're new to crypto and have just discovered or heard about SPX6900 (SPX) — and you're probably wondering: **What is SPX6900 all about?**

A Pure Belief Asset

SPX6900 represents many different things to many people, but at its core, it's best described as a **Pure Belief Asset (PBA)**. It's a token backed by nothing but the **high conviction** and **unwavering belief** of its holders. It represents a revolution, a movement, a tribe, a culture, a philosophy and a bold, ambitious mission to **flip the stock market** — specifically, the S&P 500. This means our mission is for SPX6900 to become more valuable than the S&P 500's approximate current market capitalisation of \$52.4 trillion by reaching a \$69 trillion market cap.

SPX6900 is a growing community of individuals **united by a shared purpose and a common vision**: to flip the stock market through the power of mass collective, pure belief.

It is Tokenized Hope

It is tokenized financial hope for thousands of disillusioned people who are dissatisfied with our monetary system, the 9–5 modern-day slavery, wealth inequality, corporate Traditional Finance (TradFi), the rise of AI as a threat to productivity and opportunities in the workforce, and the gimmicks, rug pulls, and utility narratives within the crypto space.

SPX6900 is unique among the tens of thousands of cryptocurrencies on the market and has the potential to reach trillions in market cap one day — through community, belief and long-term conviction, people can achieve life-changing outcomes.

A Second Bitcoin Opportunity

It shares many cultural and philosophical similarities with early Bitcoin, yet at the same time, it is very different.

For those who missed early Bitcoin, this is a second chance to be part of a bottom-up, organically growing community with a strong philosophical culture and a mission larger than oneself: to **flip the stock market**.

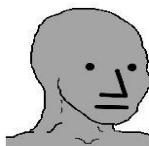

From a financial perspective, buying into SPX6900 today (as of 8th July 2025) is like having the rare opportunity to buy into Bitcoin again — at \$62.77 (Fig 1.4).

(Fig 1.4 – BTC with the Market Cap of SPX6900)

Bitcoin was a once-in-a-lifetime opportunity for those brave enough to believe in something innovative and novel.

SPX6900 is a once-in-a-lifetime opportunity for everyone who missed Bitcoin, for the younger financially struggling generation, and for those seeking hope — if they are bold enough to embrace a new culture founded on pure belief.

Normie Skeptic

6900er

What's SPX6900?	A mission/movement token.
What's the mission/movement?	Flip The Stock Market.
How are you going to do that?	Stop Trading, Believe In Something, and Persist Forever.
How does that work?	DCA & HODL (Stop Trading); Shill & Chill (Believe In Something); Repeat (Persist Forever).
There's got to be more to it than that!	As long as the community shares the same belief system, then no. That's all there is to it.
When's it going to flip the stock market?	When we reach Cognispheric Singularity.
What's the Cognisphere?	It's the total belief consciousness of Aeons.
What's an Aeon?	A true believer of SPX6900.
How's it different from Bitcoin?	Bitcoin is Digital Gold. SPX6900 is Spiritual Gold.
What's the difference?	Bitcoin is a monetary store of value backed by Math. SPX6900 is a communal store of value backed by Belief.
How can Belief be a store of value?	Anything can be a store of value if the community agrees that it is.
Which blockchain is it on?	Ethereum, Solana, Sui, and Base (Ethereum L2).
Sounds interesting. Where do I begin?	Go to SPX6900.COM and follow @SPX6900 on X.

Human Connection and Belonging

We live in a digital world where people are forming connections and finding a sense of belonging in online communities more than in real life.

SPX6900 is a tokenized form of human connection and belonging. It's a community of people who share the same goal and vision (Fig 1.5) – finding belonging and forming meaningful connections with one another.

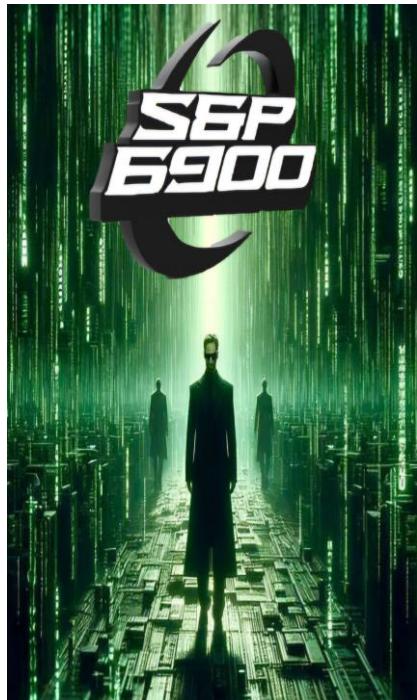

(Fig 1.5 – SPX6900 Community on X)

In today's world, it's often difficult to find people who truly care about financial freedom, escaping the 9–5 Matrix slavery system, or who are concerned about the future with the rise of AI and the debasement of our currency, and are driven to proactively take risks to improve their lives.

But online, you can discover communities like **SPX6900**, where you feel a true sense of belonging — because it's a tribe of people with a vision you resonate with: **to flip this corrupt system and win together.**

Do not underestimate the value of **tokenized human belonging, connection, and hope** — especially as we move further into a potentially dystopian future. Now more than ever, we need a community of like-minded individuals to belong to in order to escape it and win together.

Why is SPX6900 Different?

	Diamondhandedness Holders never sell, period.
	High Community Price Targets The more ambitious the internal community price target, the higher it will go.
	Holders Adding More Holders *add more* on dips.
	Belief Holders genuinely believe and work towards multi Billion / deca Billion upside.
	Free Cult Labor Holders hustle harder than any paid employee or KOL, on all fronts. For free.
	Identity Holders make the Memecoin their whole Identity.
	Critical Mass Don't get left behind by betting on low cap coins that may or may not run. Focus on established coins that have critical mass.
	Recruiting Holders onboard new people every day, non-stop. Both CT natives & outsider normies.
	Socials Holders dominate the Twitter timeline & replies ever day, non-stop.
	Culture and Lore Unique Lingo. Unique Rituals. Unique Traditions. Unique Media.
	Fun Even during down moves holders are having a lot of fun.

The crypto market today is saturated with tokens, ever since the inception of Bitcoin in 2009. Thousands of tokens are now launched daily due to how easy it has become to create a crypto project. Most of these tokens will fail miserably for various reasons. ([Appendix E](#))

So, what makes SPX6900 different from the rest, you might be wondering?

Community Quality

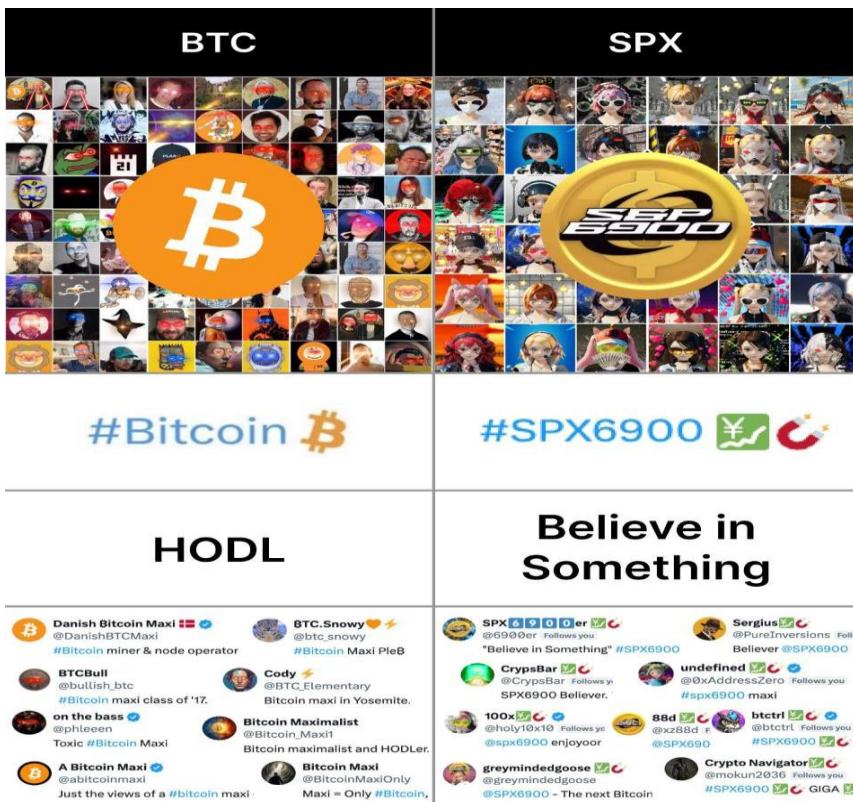

The answer lies in the **quality of the SPX6900 community** — its philosophy and culture.

The closest comparison to the SPX6900 community is, quite literally, the early Bitcoin community.

The Bitcoin community emerged from a deep-rooted anti-establishment sentiment. They were hardcore in their belief that the only crypto worth buying, holding, and stacking was bitcoin. They considered everything else to be rubbish. They saw Bitcoin as sound, hard money (i.e., a limited, capped supply) — digital gold — that couldn't be manipulated or inflated by central banks.

This philosophy was preserved and maintained over the years, attracting more people to the cause. As a result, bitcoin grew from nothing to over a trillion dollars in market cap.

Mirroring Early Bitcoin

The SPX6900 community mirrors Bitcoin's early community in many ways.

SPX6900 holds a strong **anti-TradFi sentiment**, with a clear mission to flip the S&P 500. The community embraces a core philosophy that strongly **discourages trading**, instead promoting high conviction and unwavering belief.

An **SPX6900 ‘Aeon’** (the name for a true believer in SPX) sees SPX as superior to everything else in the market — because of its values, its unique culture, and the exceptional quality of its community, all of whom are united in the mission to flip the stock market.

And just as bitcoin rose from nothing to over a trillion in market cap through the power of a loyal community — we believe the SPX6900 community can potentially do the same, and flip the stock market in the process.

A Revolutionary Mission

(Source: FliptheStockMarket.xyz)

Believing in something with no purpose is difficult.

But believing in something with a powerful mission and goal is much easier.

In the case of SPX6900, its mission is profound. Flipping the stock market is no easy feat. It's a David vs. Goliath challenge

— revolutionary in nature. But it's also fun, exciting, attention-grabbing, goal-oriented, and mission-focused.

Let's not forget that Bitcoin also started with a revolutionary mission — against fiat currency and traditional banking systems. SPX6900 carries the same sentiment, but its opposition is traditional finance (TradFi), or more broadly, [late-stage capitalism](#).

#	Coin	Price	24H	Market Cap ▾
9	DOGE	\$0.170972	▲ 2.2%	\$25,631,307,407

109	FLOKI	\$0.00009037	▲ 11.1%	\$873,285,926
110	WIF	\$0.863926	▲ 2.4%	\$862,621,732

(Fig 1.6 Top 10 Memecoins by Marketcap as of 8th July 2025)

The core utility of a token being a high-conviction community on a real-world mission is rare in the cryptocurrency space.

Most crypto tokens don't even have real communities, let alone a shared purpose or movement that unites everyone.

If you compare SPX6900 with the top 10 meme tokens (Fig 1.6), it is literally the only one with a mission and purpose.

None of the others in the top 10 have one.

The term “Pure Belief Asset” is relatively new for this type of asset class. Although SPX6900 is listed as a memecoin, this categorization is increasingly a misnomer, as it downplays the significance of what SPX6900 seeks to achieve — it is far superior in culture, purpose, and meaning compared to typical memecoins.

Nonetheless, **our enemy is TradFi** — and **our goal is to flip it!**

The Value Proposition of SPX6900

The value proposition of any crypto — once you peel back all the narratives surrounding it — is really just **the community that believes in it.**

Investing in People

We, the people, ultimately give a crypto its value for one reason or another by choosing to buy and hold it. We give the crypto its demand with our collective buying power.

Take Bitcoin, for example. It was the first of its kind — an organically growing community that, to this day, continues to buy into its ideals and philosophy of being a superior form of money and decentralised network — compared to fiat and centralized banking.

This strong community is ultimately what gives bitcoin its value and drives its price appreciation (Fig 1.7).

(Fig 1.7 – Bitcoin's Price Appreciation Over Time)

When you understand that crypto is ultimately about investing in people, you need to ask yourself:

- Which crypto are people naturally being drawn to?
- Which crypto is retaining people and encouraging them to stick with it?
- Which crypto is making people feel passionate, motivated, and inspired?
- Which crypto is acting as a magnet for people's hard-earned money?
- Which crypto is growing in loyal holders?
- Which crypto is causing people to produce creative quality writing, art, videos, and memes to promote it?
- How is this crypto doing all of the above?

That's the crypto you need to pay attention to — because a lot of other people are paying close attention to it and investing in it.

SPX6900 is a perfect example of such a cryptocurrency.

Investing in Utility Speculation

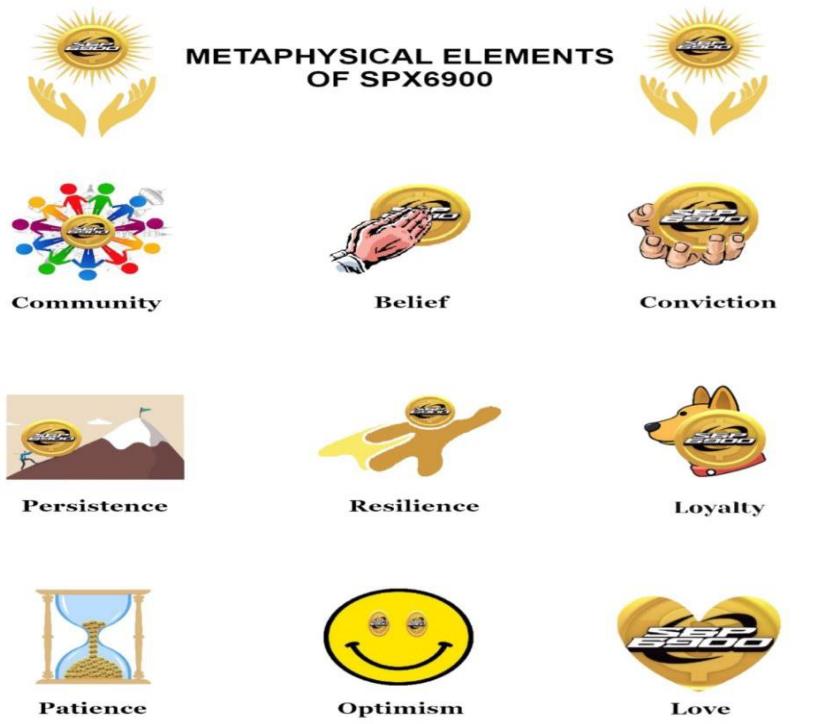

Many other cryptos are built around utility and use case narratives that attract people to buy in and speculate. Their communities speculate on the token's utility and use case becoming real and gaining mass adoption — thus giving the token value.

Even with utility tokens, you are still investing in people — you are investing in people continuing to speculate on the idea of utility.

Most of these utility tokens are merely concepts, ideas, and theories that people speculate on, with no real-world use case or mass institutional adoption. So, it is still ultimately people giving these utility narratives value through speculation, in the hope that real-world mass utility will one day materialise.

Investing in Community Culture

And then there are tokens that have no utility narratives or use cases — like memecoins. The community buys into it for reasons rooted in the appeal of the community itself. In the case of SPX6900 — **a Pure Belief Asset** — it is the culture that the community embodies that attracts and keeps people sticking to it.

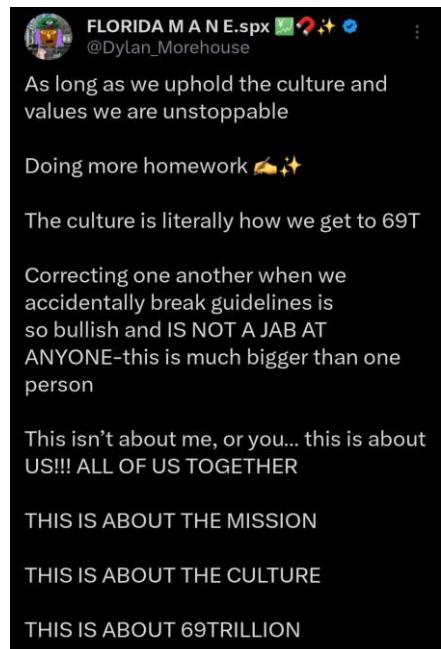

The Importance of the SPX6900 Culture

The SPX6900 culture is vital to the success of the token — just as utility is vital to the success of utility tokens.

A major point of failure for utility tokens is when the utility aspect fails to materialise or gain adoption. When this happens, the community often abandons the token, and its price collapses along with it.

This is because people who invest in utility-based crypto have no real loyalty to the community or token beyond the utility narrative becoming a reality.

Similarly, if the SPX6900 culture is lost, and not safeguarded and preserved by the community, there is a high risk of the community deteriorating — losing the very appeal that draws others to become part of it.

This is why, when you join the SPX6900 movement, respecting and upholding our culture is absolutely essential for the growth and success of the community.

Take Bitcoin, for example — it wouldn't have been able to grow from nothing to a trillion-dollar market cap over the years if the Bitcoin community hadn't maintained and preserved its culture.

The philosophy of Bitcoin maximalism encouraged everyone to believe that Bitcoin is superior to everything else, to keep stacking it, HODLING it, and taking full control and ownership over it. This preservation of culture by the community not only attracted people to Bitcoin but also gave them the conviction to stick with it.

And if SPX6900 is to reach trillions in market cap and one-day flip the stock market, it will only be able to achieve this through a strong community that upholds and preserves the SPX6900 culture through the bull and bear markets.

The success of SPX6900 ultimately depends on the community — and the success of the community depends on

its ability to embrace, embody and preserve the SPX6900 culture and philosophy.

Without this culture, there would be no strong, high-quality community forming behind SPX — which would make the token no different from the majority of other tokens in the crypto space: short-lived [pump-and-dump rug pulls](#) that will never flourish into anything special or great.

One of the great features of SPX6900 is that it doesn't have a utility point of failure. That's one concern the community doesn't have to worry about.

Our only real risk is self-degradation — failing to maintain our culture and philosophy.

If we ***persist forever*** in upholding our culture, then we have no real point of failure. Our message is sound, our movement is attractive, and we can continue growing one holder at a time until we achieve our mission to flip the stock market.

However, we **should strive to protect our culture** — especially as we grow — in order to survive long-term, endure across multiple cycles, and successfully flip the stock market.

What is the SPX6900 Culture?

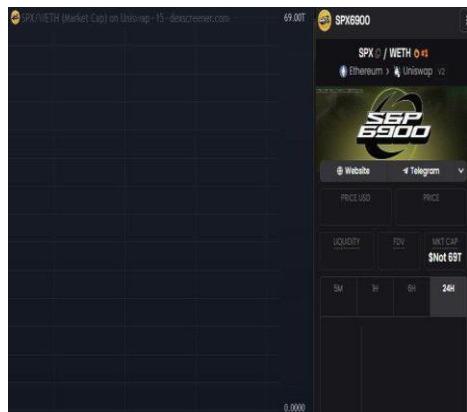

Stop Trading and Believe in Something

This encourages the community to adopt a long-term high conviction, diamond-hand (i.e. not selling), [Dollar Cost Averaging](#) (DCA) mindset when buying SPX6900 – rather than the short-term mentality of traders who seek quick profits without any belief in the community.

There Is No Chart

Our culture strongly discourages posting charts and the distractions that come with them.

That's a short-term trader's game. SPX6900 is a long-term, high-conviction play.

That's why we say price is binary: **have we flipped the stock market or not?** If not, then we still have work to do.

Not obsessing over charts also frees up valuable time for more important things, like creatively promoting SPX6900 and enjoying meaningful connections with other Aeons while building long-term relationships.

The Only Enemy Is TradFi

This reflects our rebellious, anti-system, anti-corporation sentiment — opposing everything the traditional financial system represents. It's very similar to early Bitcoin and its anti-bank ideology. Our mission is after all to flip the stock market.

Persist Forever

This resilient mindset — of never giving up, resisting the unfairness of the system, enduring the challenges of our mission, and outlasting everything no matter how long it takes — is the heartbeat and soul of our community.

**PERSIST
FOREVER**

How would we ever be able to achieve our ambitious goal of **flipping the stock market** one day and **reaching trillions**, if not by Persisting Forever?

No Lewd Posting

We simply don't allow that in our community. We keep it clean.

Peaceful Life Over Greed

This is what happens when you stop chasing charts, candles, and price movements. That mindset leads only to stress, driven by greed and the urge to time the market. A peaceful life is lived by DCA-ing into SPX6900 with a long-term, high-conviction mindset — without chart-watching.

It is far more peaceful and rewarding to focus on time in the market rather than trying to time the market.

Simply DCA and touch grass.

PvE Only, No PvP

Trying to be a Multi-cycle Coin

Player vs. Player (PvP) behaviour has corrupted much of crypto — it’s toxic, selfish, and prevents strong communities from forming. SPX6900 is strictly a Player vs. Environment (PvE) community. We are not against each other — we are united against the TradFi system.

We consistently work together to grow and build a strong community capable of flipping the stock market one day.

Promote Positivity

Our community lives by the motto of defeating haters, skeptics, and critics with love — not by reciprocating their negativity. We wish others success. We tell people we love them. And we genuinely try to help others by sharing SPX6900 with them.

Infiltrate Everything!

The SPX6900 community is one of the hardest-working in the crypto space — unlike anything I've ever seen in all my years in crypto. We're talking about people bull-posting daily on social media platforms, creating TikTok content, YouTube videos, and Instagram reels, starting podcasts, going out into the streets of their towns and cities to share SPX6900 with others, and even producing [comics](#), [books](#), e-books, merchandise, websites, and more.

We are truly committed to spreading the message and mission of SPX6900 by reaching as many people as possible — we're infiltrating everything!

All the Principles Combined

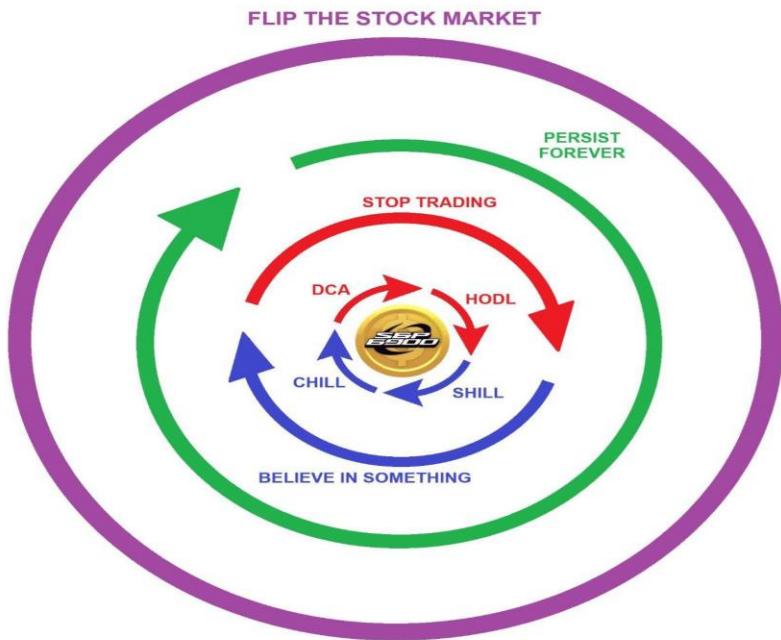

When you take all the positive principles of the SPX6900 culture and combine them, it truly creates a unique and special community within the cryptocurrency space.

Some communities may possess high conviction and a no-trading mindset, but you may find they are also very toxic, negative, and exhibit cutthroat behaviour.

Other communities may appear positive at first — but you soon realize they're just PvPing each other. As soon as there's any sign of price appreciation, they rush to dump on one another, preventing any real trust or loyalty from being formed within the community.

This is why SPX6900 is a special kind of community — different — and its culture should be upheld and respected.

A **Pure Belief Asset** like SPX6900 requires a culture that protects the community and its belief system in order for it to thrive and be successful — and that's exactly what it has.

Outsiders notice this, and they're drawn to our passion, conviction, philosophy, and mission. They want to be part of our community, but what makes them stay and build their own individual conviction is the culture.

The Reality of the Crypto Space

The crypto space has evolved significantly over the years since the inception of Bitcoin. A newcomer joining today would be bombarded with so many different communities pitching their tokens that it can become extremely overwhelming to know where to start and what to start with ([Appendix E](#)).

I'd like to warn you that the vast majority of tokens in the crypto space are dead-ends. They have no real future and will likely disappear into oblivion for one reason or another.

You really don't want to waste your time or money committing to these dead-end crypto tokens, as it will likely leave you with a sour taste in your mouth when the community dies off and the price collapses — causing you to lose all your money.

Be careful, invest wisely, and do your due diligence.

On the bright side, if you invest in the right token and community at the right time, it could drastically change your

financial life. Life-changing money. Generational wealth. Or simply financial freedom and early retirement opportunities.

I would break down the crypto space into two categories:

- **Bitcoin**
- **Altcoins** (all cryptocurrencies other than Bitcoin):
 - **Utility tokens**
 - **Memecoins**
 - **Pure Belief Assets (PBA)**

Bitcoin (BTC)

Bitcoin is the king of all cryptocurrencies. It has the strongest community and, as of 8th July 2025, is trading at \$109,037 with a market cap of around \$2.1 trillion.

Because of how high BTC is in both market cap and price, it's no longer ideal for the average person to invest in with the expectation of making a huge return on investment (ROI) in a relatively short time frame — unless you're already wealthy and can invest a large amount into BTC.

For most everyday people, using BTC as a long-term savings or retirement fund is the best strategy today. This involves dollar-cost averaging (DCA) into Bitcoin over time with a decades-long vision. Bitcoin is a safe option over a long-term time frame, but it's not the best crypto if you're looking for higher returns from a smaller amount of capital in a much shorter period.

Utility Tokens

Cryptocurrencies outside of Bitcoin that pitch a use case or utility function are considered utility tokens. The space is saturated with utility tokens — ranging from payments, gaming, and AI data processing, to tokenization, Layer 1s, Layer 2s, interoperability, Metaverse, DEX tokens, and more.

There is a utility narrative everywhere.

Utility tokens are mostly speculative investments. A large portion of their supply is typically held by the team, who often sell to retail investors to fund the project. In many cases, the team and the utility narrative become the main point of failure for these tokens. The teams are often incompetent, fail

to deliver on their promises, don't build a product, or build a poor product that never gains real usage.

The value of these tokens, for the most part, comes from a growing community speculating on how high the price could go if the token is ever actually used. This is why utility tokens often experience price pumps following news of partnerships or exchange listings — driven by hype and speculation. However, most of these partnerships are superficial and do not result in real adoption of the technology or utility of the product (if it even exists).

Utility token communities are usually fragile, with loyalty tied mainly to the belief that the promised utility will eventually materialise. If it doesn't — or takes too long — the community can quickly lose interest, sell their tokens, and move on.

Ultimately, with utility tokens, the community's loyalty depends on whether the project delivers its promised use case or utility narrative (which often it does not) — not necessarily on the people, culture, or philosophy behind the token.

In the case where the team does deliver on utility, the value of the utility tokens is anchored to their actual utility, which only acts as a restriction on price growth. On the other hand, a pure belief asset like SPX6900 has a high price ceiling, making the opportunity as big as our collective belief — with no utility influence limiting its potential.

Memecoins

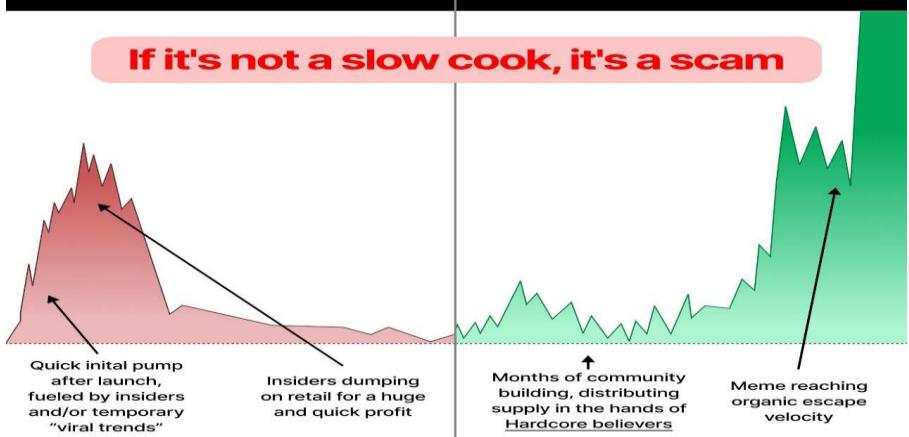

Through various launchpads, anyone can now create a memecoin without any technical knowledge. Memecoins are tokens usually created for fun, as a joke or satire, with no serious use case, narrative, or purpose. The value of memecoins is mostly community-driven, with people investing in them because they appeal to them — often hoping to make quick flips and profits due to their high volatility.

This is why the majority of memecoins are pump-and-dump schemes and short-lived PvP hype cycles.

Fleeting Trends

Real Cults

If it's not a slow cook, it's a scam

Low-cap memecoins are extremely high risk, and many of them are rug pulls — where the creator dumps their supply on the community, crashes the price, and disappears.

However, from the chaos of low-cap memecoins, resilient communities can occasionally emerge — surviving multiple setbacks and price crashes to gradually grow into large communities and evolve from their meme-joke origins into something more meaningful and impactful.

A good example is SPX6900, which evolved from a typical memecoin origin into a **Pure Belief Asset revolution**,

with a powerful mission and movement that people are rallying behind.

Pure Belief Assets

A Pure Belief Asset is a type of crypto whose value and growth are driven entirely by the collective shared belief, conviction, loyalty, work ethic, passion, trust, and culture of its community.

The value is derived from pure collective consensus, belief, and perception — rather than any intrinsic utility, technology, cash flows, practical use, or financial backing from institutions.

A close example would be early Bitcoin. Even though it was a new technology, the masses and the traditional financial system did not pay much attention to it until years later —

after the early community, through pure belief, established Bitcoin to a point where it became obvious that it was here to stay and wasn't going anywhere, despite being [declared dead by critics hundreds of times](#). Meanwhile, bitcoin has only continued to increase in value, fuelled massively by belief from the start.

SPX6900 is what I consider the first **Pure Belief Asset** in crypto due to its **key traits**:

1. Its value comes from the community's unshakeable belief and shared conviction in the ideology, philosophy, culture, mission, and movement — which people resonate with and see as a source of financial hope and opportunity.
2. The entire culture and philosophical mantra of SPX6900 is centred around belief. Belief is its marketing and its unique core selling point — no other crypto has ever positioned its core value proposition around the concept of pure belief.

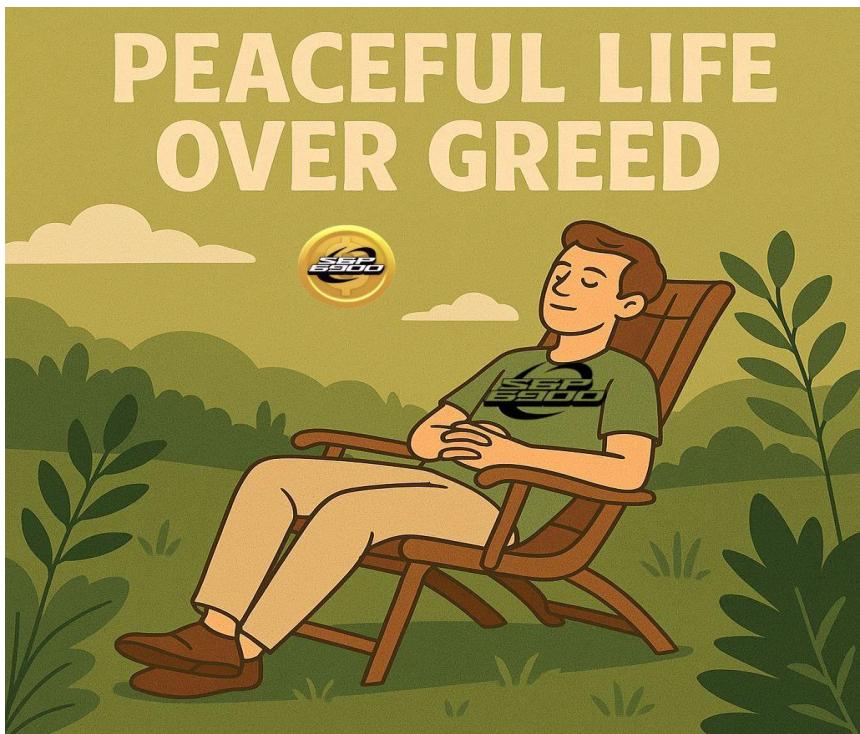

3. It doesn't require a traditional utility use case to grow in value — because the culture, community, belief, and pure conviction *become* the utility through the perception of the people.
4. Price appreciation stems from a strong community culture that promotes pure collective belief, diamond-handing, long-term holding, and consistent DCA — creating an environment that drives long-term SPX demand and scarcity.

Be aware that not every token claiming to be a **Pure Belief Asset** truly is one. The term may become a marketing tool used to attract people to certain communities.

But in the case of SPX6900, the data from the [Diamond Hand Leaderboard](#), for example, and the observable **community culture** show that we are not simply using the term ‘Pure Belief Asset’ for lip service — we are genuinely living by the characteristics that define one, distinguishing SPX6900 from a mere memecoin.

If you study the community, you'll see that we deeply respect our culture — without which the token would collapse. We don't trade, we don't chart-watch, we don't PvP. Instead, we DCA, diamond-hand, and work hard to help others by sharing our culture and mission — one that is greater than ourselves: to flip the stock market.

We prefer a PvE, peaceful life over greed.

Why Choose SPX6900?

Once the reality of the crypto space today is understood, it becomes very clear that SPX6900 is unique in a space flooded with utility narratives (that have a high chance of failure) and short-lived memecoins.

As a Pure Belief Asset, SPX6900 stands out with everything it has to offer. People can replicate white papers, replicate technology, replicate utility token narratives, and replicate memecoins. However, you cannot replicate community belief

and the intangible but powerful culture that the SPX6900 community upholds.

The feelings of belonging, purpose, and financial hope that motivate us within the SPX6900 community cannot be duplicated.

You cannot copy and paste community conviction and loyalty — they have to be built and earned, just as they have been with SPX6900.

This is why newcomers starting out in crypto today, given the current landscape, should focus on **studying SPX6900**.

SPX6900 Tokenomics

Ticker: SSPX

Total supply: 1,000,000,000

Circulating supply: 930,993,091

Total burned: 69,006,909 (6.9%)

SPX is multichain, bridge powered by Wormhole

The price of any cryptocurrency is ultimately dependent on supply and demand factors. We've already covered the demand for SPX6900, which ultimately comes from the community and its growth. Now let's look at the other side of the equation — supply.

SPX6900 Supply

The supply of SPX6900 is **fixed**. There is no inflation and no newly minted tokens coming into existence — the total supply is capped at **930,993,091 SPX tokens**.

A fixed supply is always attractive because it introduces scarcity. As the community grows and more people consistently DCA, diamond hand, and refuse to sell their SPX

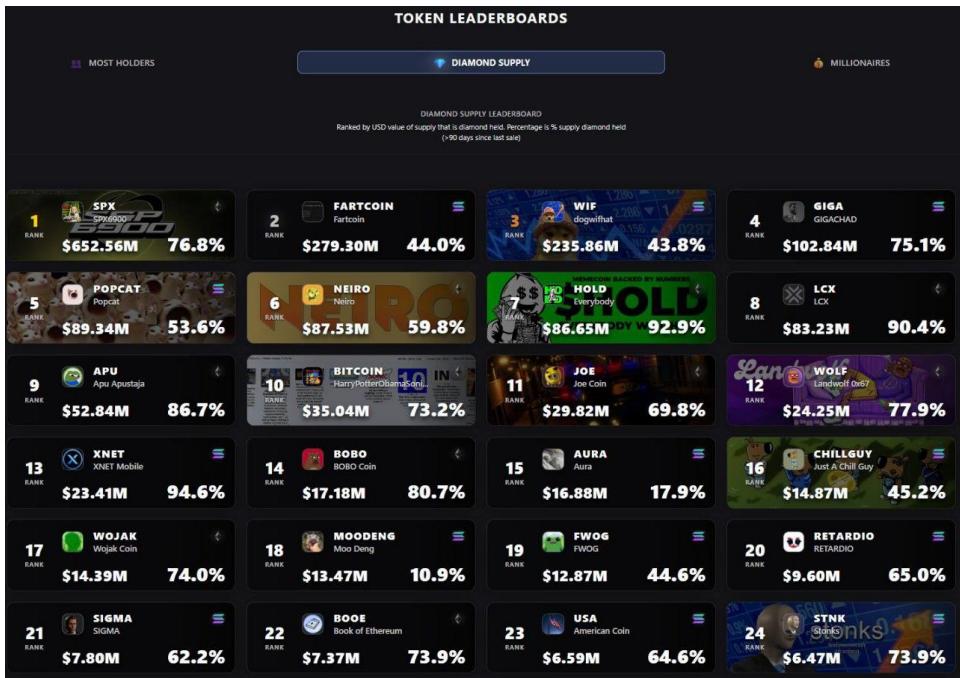

tokens, that gradually reduces the circulating supply — leaving growing demand to fight over fewer available tokens.

This phenomenon mirrors Bitcoin, whose supply is capped at 21 million tokens. As demand increased and its HODLing culture took hold, more and more people were trying to buy from a shrinking pool of tokens. This inevitably drove up the asset's price. High demand against low supply leads to price appreciation.

Finite Supply, Growing Demand and Diamond Hands

In the case of SPX6900, we have a fixed, finite supply and a steadily growing high-conviction culture that strongly discourages trading. This is a powerful recipe for long-term price appreciation.

The diamond hand culture of "**Stop Trading and Believe in Something**" isn't just a slogan within SPX6900 — the community backs it up with real action (Fig 1.8).

(Fig 1.8 – Diamond Hand Supply Leaderboard)

The **Diamond Supply Leaderboard** (as of 23rd June 2025) ranks the top cryptocurrencies based on the USD value of supply that is “diamond held” — meaning tokens held by addresses that haven’t sold in over 90 days.

At the number one spot is SPX6900:

- **Total Diamond-Held Value:** \$652.56 million
- **Percentage of Supply Diamond-Held:** 76.8%

This means that, as of 23rd June 2025, **76.8% of the supply** — with a **market value of \$652.56 million** — is held by long-term holders who haven't sold a single SPX token in **over 90 days**.

This data clearly shows that the SPX6900 culture is being embraced by the majority of the community. It reflects extremely strong conviction — stronger than any other community on the leaderboard. Being ranked number one shows that SPX6900 has the strongest holder base out of all those communities, both in terms of value and percentage of supply held.

This metric is a powerful signal of community strength, long-term conviction, resilience to market volatility, and the effectiveness of our culture and pure belief in SPX6900.

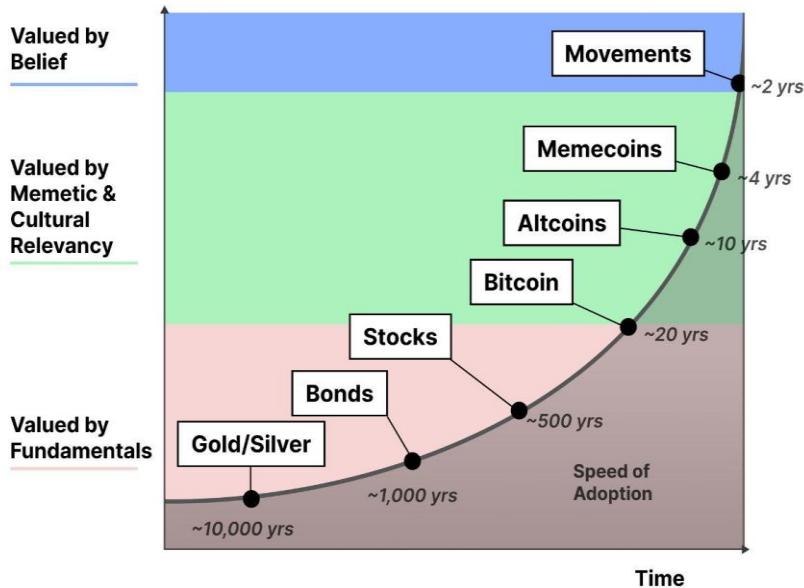

It is extremely bullish.

SPX6900 isn't like anything else on the market.

The community is deeply committed, loyal, passionate, hard-working, and diamond-handed — embodying massive belief and a unique cultural movement built around this **Pure Belief Asset**: SPX6900.

What is SPX6900's Moat?

The term *moat* originates from a castle moat — a deep, wide ditch filled with water surrounding a castle to protect it from attacks.

In the case of SPX6900, its moat refers to the factors that protect it from competitors and help it thrive long-term — i.e., what makes it hard to copy or compete with.

Since there are thousands of cryptocurrencies all competing for your attention, and you want to find the winning one, it's imperative that you can identify its moat. You need to be able to recognize its competitive edge — what differentiates it in a crowded market, what makes it unique in a way that others can't easily replicate. Without a moat, there's no real long-term success for the token.

Before we examine SPX6900's moat, let's first take a look at Bitcoin's, since it is the most successful cryptocurrency to date and shares many similarities with SPX6900.

Bitcoin did have first-mover advantage, but its technology is not its moat.

Many other cryptocurrencies have been released since, with far superior technical capabilities — yet none have surpassed Bitcoin in value.

Bitcoin's moat lies in the fact that it was launched with an ideal narrative and philosophy during a time when people were yearning for an alternative to centralized banks and fiat currency manipulation. The growing post-2008 distrust of banks, governments, and monetary policy created the perfect environment for a trustless, decentralised, deflationary hard-currency asset like bitcoin.

A community of believers emerged — people who bought into Bitcoin's ideology. A culture and philosophy formed around it, acting as the castle wall that protected and preserved it as the community grew. Most people didn't flock to bitcoin because of its tech, but because of the narrative: **an asset that couldn't be manipulated.**

The culture built conviction, turning early adopters into die-hard believers who stacked bitcoin and refused to sell, creating scarcity and long-term price appreciation — which, in turn, attracted even more conviction.

When you peel everything back, bitcoin's moat stems from a purely social psychological mass belief system — coordinated, aligned conviction held by its community.

Moats that are based on technology can easily be leapfrogged by superior tech — however, you can't simply build a mass network of belief and culture.

This happens naturally and organically.

In Bitcoin's case, having first-mover advantage and launching at the right time helped immensely.

Nonetheless, although difficult to replicate, it isn't impossible.

SPX6900 has naturally and organically harnessed a similar dynamic of growing mass belief.

It has also emerged at a time when people are yearning for something to believe in — something to restore hope. Bitcoin is currently far too high in value to attract the average person seeking psychologically life-changing wealth creation.

Meanwhile, the socio-economic environment continues to deteriorate. The wealth gap is widening, and distrust in governments and their monetary policy is at an all-time high. The younger generation is struggling. Personal debt is skyrocketing. We are literally working harder and longer for

less. The idea of depending on Universal Basic Income is becoming more of a reality for many.

The point is: **we are searching for a solution. We want something to believe in.**

Then emerges SPX6900, with a mission to flip the stock market and oppose late-stage capitalism, accompanied by a powerful rallying cry to believe in something greater — and surrounding it is a cultural and philosophical “castle wall” built to protect it.

SPX6900 has organically cloned a similar social-psychological mass belief system of coordinated human conviction, just as Bitcoin once did.

A screenshot of a Twitter post from the account @VoyagerFuture. The profile picture shows a sailboat on the water. The post text reads: "#SPX6900 is the most warm and positive and encouraging community of believers I've seen in crypto. I've been in crypto since \$BTC was worth \$1000. There has been nothing like \$SPX community, besides #BITCOIN." The timestamp at the bottom left is 1:44 am · 16 Apr 25 · 73 Views. The top right corner of the card has a 'Follow' button and three vertical dots.

SPX6900's Moat Consist of:

- A pure belief-driven culture
- A strong, loyal community
- A unique and unified community-driven philosophy
- A simple and relatable mission/movement that sets it apart from most coins
- Cultural resilience against market cycles
- Cultural stickiness

Cow 📈⚡️✅
@realcryptocow

the only moat a token has in crypto is its concept and its holders

that's it.

No One is Coming to Save Us

We are living through one of the most pivotal transitions in human history. The world is changing — rapidly — and for many, it's not for the better. The systems that once promised stability, opportunity, and fairness are now fraying at the edges. The middle class is being hollowed out. The younger

generation is drowning in debt, rising living costs, and shrinking opportunities. For most people, life is becoming harder, not easier. And the uncomfortable truth is: **no one is coming to save us.**

The Harsh Reality of the World Today

You can feel it. The cost of living keeps climbing (Fig 1.10), but your income doesn't. Rent goes up. Food prices soar. Essential services feel increasingly out of reach. Yet governments and institutions seem paralyzed, or worse — indifferently making promises they don't keep. Inflation silently erodes your savings (Fig 1.9). Jobs no longer offer security. Owning a home for the younger generation feels more like a dream fading into myth.

Meanwhile, the wealth gap grows wider. A small elite accumulates more than entire populations combined. The middle class — the traditional backbone of society — is being crushed by inflation and debt. The younger generation, despite their university level education, is becoming the poorest in modern history.

And on the horizon, a new disruption is looming: **Artificial Intelligence.**

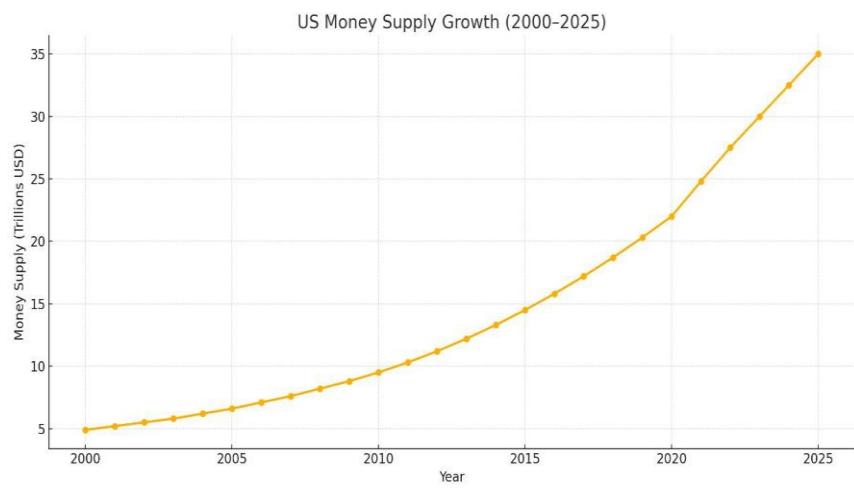

The Threat of AI and the Vanishing Job Market

AI is transforming the world at lightning speed. While it promises innovation and convenience, it also threatens to displace millions of jobs – making Universal Basic Income (UBI) and complete government dependence an eventual reality. Truck drivers, customer service reps, even creative professionals – no field is truly safe. And those at the top will benefit most, leveraging AI to increase profits while cutting costs – often at the expense of the average worker.

You won't be able to outwork a machine. You won't outpace an algorithm. This isn't science fiction anymore. It's here – and unless you're prepared, it would leave you behind.

Inflation: The Silent Thief

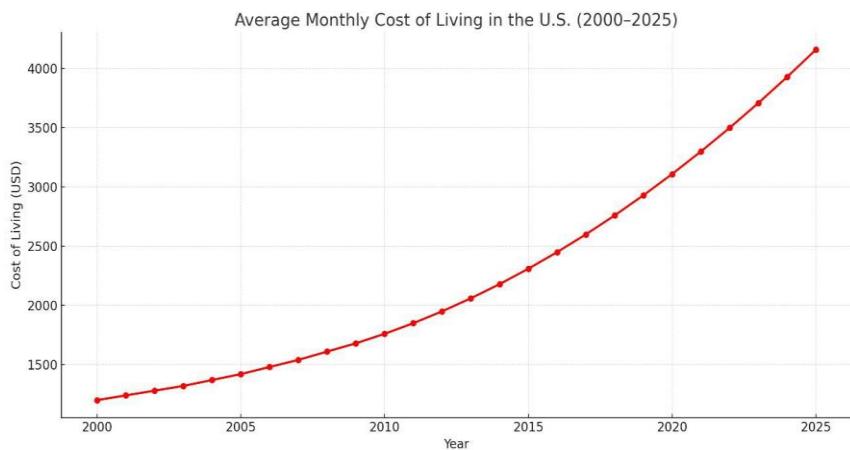

Most people don't realize this, but **inflation is one of the greatest threats to your financial future** (Fig 1.9).

(Fig 1.9 – US Money Supply Expansion in Trillions (2000-2025))

Every year, the money in your bank account becomes worth less. Not because you're spending it, but because the monetary system is designed to dilute your purchasing power.

The price of groceries, housing, healthcare, rent, education and general living costs keeps climbing (Fig 1.10) — but your savings purchasing power don't. If you're not actively finding a way to beat inflation, you are being robbed every day — slowly and silently.

(Fig 1.10 – Average Monthly Cost of Living (2000-2025))

Let's be brutally honest: the system is not broken — it's working exactly as it was designed. It rewards those who already have capital, connections, and control. For everyone else, it's a treadmill going nowhere. You can work harder, but it doesn't mean you'll get ahead.

And this is why now, **more than ever**, we need to take control of our financial futures. We cannot rely on governments, employers, or outdated financial advice to save us. The responsibility – and the power for change – is in our hands.

The SPX6900 Community is Taking Massive Action – Now

In the midst of all this chaos and uncertainty, a new revolutionary path is emerging – **SPX6900** to rewrite the rules of wealth for our own hands.

We as a community understand that **no one is coming to save us**, so we have chosen to **save ourselves and each other**.

Through DCA, diamond-handing, and passionately spreading the message with purpose and conviction – we are creating a new kind of wealth: **one based on pure belief, trust, and shared mission.**

This is your **wake-up call!**

Take Massive Action – Now!

If you're struggling financially, if you're worried about your future, if you're tired of being at the mercy of government systems you can't control — it's time to act. It's time to **study SPX6900**. To understand the culture. To join the movement. Even if just as a silent observer at first.

You don't need to be rich. You don't need to be a financial expert. You just need belief. And that belief — once cultivated — can become the foundation of something powerful in your life.

This isn't about quick overnight riches. It's about long-term transformation. It's about aligning with a community with shared purpose and values that's focused, grounded, and mission-driven.

If you don't take action now — nothing will have improved five years from now!

Because **no one is coming to save us** — but if we work together, **we can save ourselves**.

The Future Looks Bright

I hope by now you have a better understanding of SPX6900 — our community, the mission, the movement, and most importantly, our culture.

The Future We're Building

The SPX6900 community is working to build a future where we all win together. As a community, we are constantly building and collaborating for each other's success. No single person can do it alone. Our passion, work ethic, and ability to **Persist Forever** as a collective are unmatched.

Our primary long-term vision and goal is to flip the stock market — a symbol of late-stage capitalism. That is what ultimate success looks like. It just so happens that, in the process, billionaires, millionaires, and hundreds of thousands will be made by many ordinary people along the journey. This will be the reward for having a long-term vision, high conviction, diamond hands, and for consistently DCAing into the Pure Belief Asset — **SPX6900**.

We Are Still Early

As of July 1st, 2025, the S&P 500 market capitalisation is \$52.208 trillion, while the SPX6900 market cap is around \$1.2 billion.

We are still just getting started.

Our goal is to flip the stock market and reach a **\$69 trillion** market cap. This would make each SPX token worth **\$74,000**.

Total S&P 500 Market Capitalization

\$52.208 trillion

As of 2025-07-01

S&P 500 Companies

Component Returns

Historical Returns

Now, maybe the words *delusional*, *crazy*, *ambitious*, or *never gonna happen* are running through your mind.

But I would argue: **don't miss the point.**

(Source: Fliphestockmarket.com)

Never underestimate a growing delusional, crazy, ambitious, hard-working, diamond-handing, and Persisting Forever community on a mission.

People who heard about Bitcoin early and dismissed it for the same reasons now look back and regret not believing — like the Bitcoin community did — and not buying some.

Don't make the same mistake twice.

History is simply repeating itself with another asset class — this time backed by pure belief and high conviction from a growing community of people who are fed up with the system, dissatisfied, disillusioned and ready to take control and create change.

Because **no one is coming to save us**. We have to save ourselves. And people are hearing the SPX6900 message and being pulled in — **because it resonates**.

For many, it has become the natural and obvious solution in this day and age: **to be part of a community with a shared vision and a purpose larger than oneself** — something to believe in that can drastically change our lives.

The Potential Growth of SPX6900...

When we reach **0.1%** of the current \$52.2 trillion S&P 500 market cap, each SPX token would be worth **\$56**.

When we reach **1%** of the current \$52.2 trillion S&P 500 market cap, each SPX token would be worth **\$560**.

When we reach **10%** of the current \$52.2 trillion S&P 500 market cap, each SPX token would be worth **\$5,606**.

I could keep going, but you get the picture.

At each stage, the following number of tokens would make you a millionaire: **17,857 SPX**, **1,785 SPX**, and **178 SPX**, respectively.

The growth potential for SPX6900 is multi-cycle — since the narrative and mission of flipping the stock market is a long-term, multi-cycle vision.

The higher we go in market cap — flipping each S&P 500 company individually — the more attention the SPX6900 community will get. And as long as we are able to maintain our culture to preserve our community, more people watching will begin to ask themselves:

“What if they actually do flip the stock market?”

“I should get some – just in case.”

From there, they build their own conviction.

Eventually, it becomes a self-fulfilling prophecy — one holder at a time.

A Spark to Trillions

As we, the community, continue to ***persist forever*** in preserving our culture and infiltrating everything, we will only keep getting stronger and continue to grow organically.

However, all it really takes is a spark for a strong community to be catapulted into the stratosphere — to reach critical mass — and to continue snowballing in acceleration.

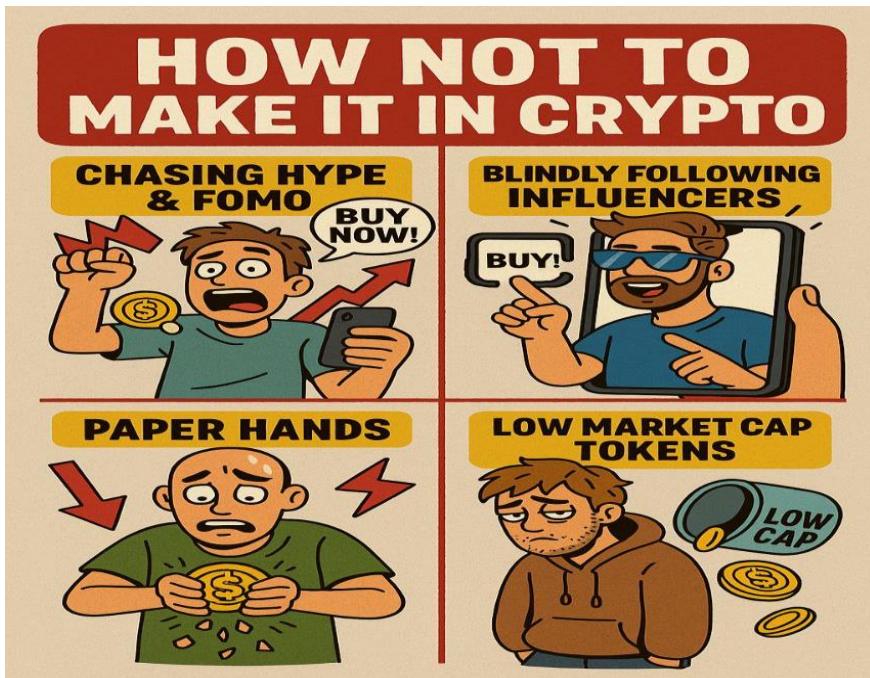

The longer we persist, the greater the likelihood of that spark occurring, because we've remained relevant and increasingly harder to ignore.

A spark could come from anything:

- Influential people talking about us
- Mainstream media reporting on our “delusional” belief of flipping the stock market
- Greater acceptance by the masses

Whatever the spark may be, the result could launch us into the hundreds of billions — even trillions — especially in a risk-on environment of low interest rates and abundant liquidity looking for somewhere to park itself. ([Appendix G](#))

How Not to Make it in Crypto

It's very easy to fail in crypto — not because of crypto itself, but because of personal decisions and behaviour.

Even though SPX6900 is showing clear signs of being a potential winner, it's still possible to know this and yet not make it in crypto because of self-sabotage.

Let's take a look at some of the ways people fail in crypto.

Chasing Hype & FOMO

This behaviour stems from a short-term, gambling mindset.

People who do this tend to chase trending tokens promoted by influencers, jumping into projects they don't understand — usually after a massive pump — thinking it will keep going.

This isn't really investing; it's treating crypto like a lottery ticket in an attempt to get rich quick. These individuals often jump from one PvP community to another, hoping for a quick 100x, without ever taking the time to truly understand the space.

The **majority of people lose money this way.**

This is why SPX6900 promotes strong values from the start: **“Stop trading, and believe in something.”** It's about rewiring bad habits and helping people stop losing money.

Trusting Influencers Blindly

Most people who fall into the trap of chasing hype and pump-and-dump crypto tokens usually do so by blindly following an influencer shilling the token on social media.

They often invest without doing any research or due diligence of their own — relying solely on the hype created by the influencer, hoping this time the outcome will be different.

Many of these influencers promote tokens that have no real community or culture. They're simply using their large audience to pump the price so they can dump their early-bought tokens on newcomers, crash the chart, and move on to do it all over again with another token.

Blindly following influencers is one of the easiest ways to get wrecked in crypto.

Investing in Crypto with No Community

Put simply, a crypto project with no community is a dead project.

There are two common types:

1. A completely dead community — no engagement on socials, no interaction, no volume — just silence.
2. A seemingly active community with engagement, hype, volume, and even price action, but with a strong PvP (player vs. player) environment. This kind of community is also doomed — it's just a matter of time.

Both scenarios are red flags and will likely lead to losses.

Avoid any crypto project that lacks a real community.

Paper Hands

Having paper hands is essentially the opposite of having diamond hands.

You sell too early, not realizing that real growth often takes months or even years.

If you've discovered the right community, you need patience and conviction.

Expecting overnight success or becoming discouraged by short-term price drops is a recipe for failure.

This short-term thinking, and a lack of understanding about the power of long-term conviction, will cause you to sell out of fear during dips or stagnant periods.

Later, when the price skyrockets after you've paper-handed your position, regret will follow.

Don't be that person.

Believing in “Next Bitcoin” Promises

Many crypto projects lure people in by claiming to be the “next Bitcoin” or that they will “replace BTC,” using this as marketing hype.

These claims are often as hollow as other buzzwords like “AI” or “Metaverse,” which are frequently used to attract buyers to tokens with no real substance.

You might be wondering – **haven’t I been comparing SPX6900 to Bitcoin?**

Yes, I have.

The difference is that SPX6900 has real substance behind it: culture, philosophy, strong community and mission.

That’s one reason why Bitcoiners also buy heavily into SPX6900 – they recognize the cultural and community similarities.

There are countless tokens that claim to be the next Bitcoin without anything to back it up.

Then there’s SPX6900 – with substance.

Chasing Utility Over Culture

Many people in crypto firmly believe that every project must have utility to succeed and gain value.

I used to be one of them — a utility maxi who ignored anything without a clear use case or utility narrative.

Because I never understood the power of belief-driven communities, shared conviction, and cultural assets.

That changed when I discovered SPX6900.

Beware of Low Market Cap Tokens

Low market cap tokens are extremely high-risk. Most of them remain stuck at low caps, fail to build loyal communities, and eventually go to zero.

Don't assume a low market cap means high upside. Low market cap doesn't automatically mean undervalued — it can simply mean **high risk and best avoided**.

It's much safer to join an already established community with strong conviction — one that has already endured the low cap

phase and survived multiple drawdowns — than to gamble on unknown low caps in hopes of a 1000x.

Be cautious of diving into the slums and trenches of crypto looking for the next big thing.

Most people get wrecked doing that too.

Neglecting Security

Crypto security is extremely important.

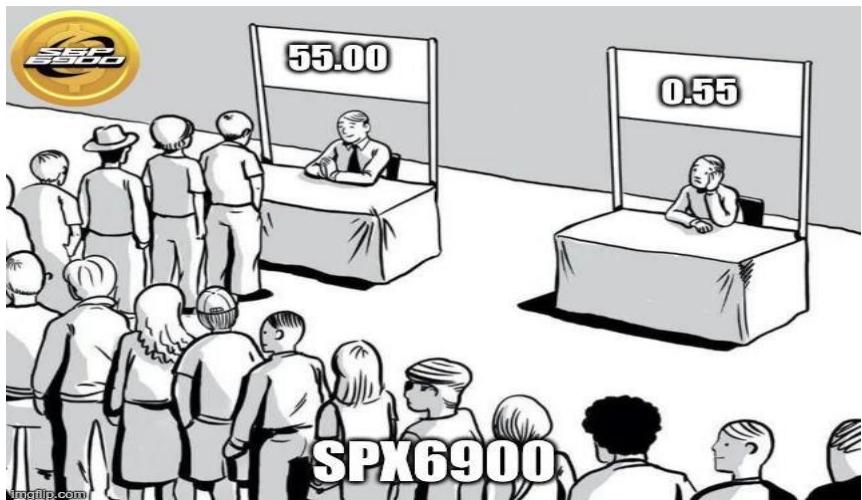

One hack can wipe you out entirely.

If you're serious about investing in crypto and building your position over time, a hardware wallet is worth its weight in gold for the peace of mind that comes with enhanced security.

There are many hardware wallets on the market, but the one I've personally used for years is [Ledger](#), and it's the one I recommend the Ledger Nano S Plus or Ledger Nano X.

Invest in one instead of keeping your crypto on an exchange or in a hot wallet on your phone.

How to Buy SPX6900?

Understanding **why** to buy is vital before learning **how** to buy SPX6900.

The *how* is easy — but it's the *why* that will determine whether you actually benefit from SPX or not. Not everyone who bought or discovered Bitcoin early actually benefitted from its incredible price performance.

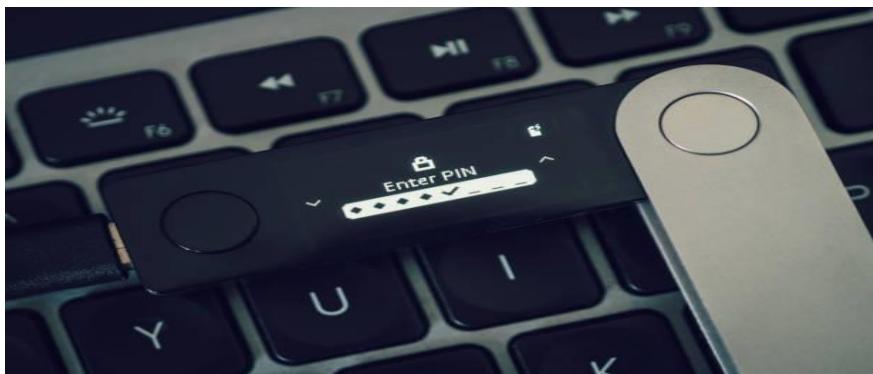

Many discovered Bitcoin early and sold it simply because they didn't understand *why* they should have held on.

Hopefully by now, it's clear why you should hold your Pure Belief Asset: **SPX6900**.

So, let's learn how to actually buy some.

This chapter breaks it down step-by-step so anyone can get involved — no matter your level of experience.

I strongly recommend that if you want the best security and protection for your crypto assets that you invest in a [Ledger Nano S Plus Hardware Wallet](#) for cold storage.

It is a much safer option compared to software hot wallets or centralized exchanges, for long-term holding and large amounts of crypto, especially if security is your top priority.

There are two primary ways to buy SPX6900, depending on your experience level and platform preference:

Centralized Exchange (CEX) Route

This is the simplest method for beginners. It involves signing up on a centralized platform that supports SPX6900, such as Kraken, and purchasing directly using your preferred currency. CEX platforms offer ease of use, customer support, and fiat on-ramps, making them ideal for those new to crypto.

SPX6900 is available on these CEX's:

[**Kraken**](#)

[**Crypto.com**](#)

[**Uphold**](#)

[**MoonPay**](#)

A [**list of more exchanges**](#) depending on your region.

Decentralised Exchange (DEX) Route

This route is for those with some crypto experience. You'll use a non-custodial wallet (like Phantom), acquire some SOL or ETH, and then swap it for SPX6900 on a DEX like Jupiter (Solana) or Uniswap (Ethereum). This method gives you full control over your assets.

Both options ultimately get you to the same destination: **becoming part of the SPX6900 movement.** The choice depends on how hands-on you want to be with your crypto journey.

Option 1: Buying SPX6900 via Centralized Exchange (CEX)

[Watch Beginner Friendly and Straightforward Video](#)

Step-by-Step:

1. **Sign Up on a Supported Exchange**

- Register an account on a centralized exchange that lists SPX6900 (e.g. Kraken).

- Complete any required Know Your Customer (KYC) (i.e., identity verification) if necessary.

1. *Deposit Funds*

- Deposit fiat (USD, EUR, GBP, etc.) or crypto like USDT into your exchange wallet.

2. *Search for SPX6900*

- In the trading section, search for the SPX6900 pair (e.g., SPX6900/USD or SPX6900/EUR).

3. *Buy SPX6900*

- Choose how much to buy, set a market or limit order, and confirm the purchase.

4. *(Recommended) Withdraw to a Personal Wallet (e.g. Cold Wallet)*

- For added security and self-custody, withdraw your SPX6900 to a personal cold wallet, like **Ledger Nano S Plus** wallet for example.
- If withdrawing SPX via the **Ethereum Network** to Ledger use an **Ethereum Deposit address**.
- If withdrawing SPX via the **Solana Network** to Ledger use a **Solana Deposit address**.

Tip: Always double-check your wallet address and networks are correct before sending crypto.

Option 2: Buying SPX6900 via Decentralised Exchange (DEX)

[Watch Video for Users Who Are More Experienced](#)

Step-by-Step (Ethereum Network Example):

1. Download a Software Wallet (e.g. Phantom or Trust Wallet)

- Create a Phantom or Trust wallet and securely save your recovery phrase.

Note: Download the official version (the app with the most downloads) in the app store and beware of fake versions from scammers.

2. Buy ETH (Ethereum's native token) and USDT

- Purchase some ETH for gas fees and USDT on a CEX (like Coinbase, Binance, Kraken etc.) and transfer it to your Software Wallet Deposit address for the Ethereum Network.

Note: If you purchased USDT from the CEX just make sure you withdraw it using the **Ethereum Network chain** to your **USDT Ethereum Deposit Address** within your Software Wallet.

3. Connect Your Wallet to DEX.

- Connect your wallet to either Uniswap or 1inch.io DEX. You can do this from inside your Phantom or Trust Wallet app.

4. Swap USDT for SPX6900 within DEX

- Search for SPX (or use the contract address) and select the SPX6900 in the token list.
- Enter the amount of USDT you want to swap
- Review the transaction details and confirm the transaction.

5. If you need to add Ethereum SPX6900 to Your Wallet:

- After the swap is complete, you may not see your SPX6900 right away. You'll need to **manually add the token** using the contract address.
- In your wallet, select “Add Token” or “Import Token”

- Paste the Ethereum SPX6900 contract address:
**0xEof63A424a4439cBE457D80E4f4b51aD25b
2c56C**
- SPX6900 should auto-populate
- Save it and you'll now see your balance

Note: Verify the **official contract address** from trusted community sources or the official website.

Step-by-Step (Solana Network Example):

- 1. Download a Software Wallet (e.g. Phantom or Trust Wallet)**
 - Create a Phantom or Trust wallet and securely save your recovery phrase.

Note: Download the official version (the app with the most downloads) in the app store and beware of fake versions from scammers.

- 2. Buy SOL (Solana's native token) and USDT**
 - Purchase some SOL for gas fees and USDT on a CEX (like Coinbase, Binance, Kraken etc.) and transfer it to

your Software Wallet Deposit address for the Solana Network.

Note: If you purchased USDT from the CEX just make sure you withdraw it using the **Solana Network chain** to your **USDT Solana Deposit Address** within your Software Wallet.

3. *Connect Your Wallet to DEX.*

- Connect your wallet to either Jupiter or Raydium DEX. You can do this from inside your Phantom or Trust Wallet app.

4. *Swap USDT for SPX6900 within DEX*

- Search for SPX (or use the contract address) and select the SPX6900 (Wormhole) in the token list.
- Enter the amount of USDT you want to swap
- Review the transaction details and confirm the transaction.

5. *If you need to add Solana SPX6900 (Wormhole) to Your Wallet:*

- After the swap is complete, you may not see your SPX6900 right away. You'll need to **manually add the token** using the contract address.
- In your wallet, select “Add Token” or “Import Token”
- Paste the Solana SPX6900 (Wormhole) contract address:

**J3NKxxXZcnNiMjKw9hYb2K4LUxgwB6t1FtP
tQVsv3KFr**

- SPX6900 should auto-populate
- Save it and you'll now see your balance

Note: Verify the **official contract address** from trusted community sources or the official website.

Recommendation:

If you have a Hardware wallet I strongly recommend you send your SPX6900 from your Hot wallet to the Hardware wallet for optimum security and long-term storage. Make sure you use the correct network (i.e. Solana or Ethereum) deposit address for the tokens.

Wallet Security Reminders

- Never share or lose your wallet seed phrase
- Don't type the seed phrase on your phone or computer
- Don't screenshot the seed phrase or store it digitally
- If your seed phrase is compromised no matter the wallet your funds are at risk
- Avoid DMs from impersonators requesting your seed phrase
- Never type your Ledger Hardware wallet seed phrase into anything but the physical device only
- Only trust links from official SPX6900 sources

Buying SPX6900 is simple. If you're new to the process and need more help, ask the person who shared this e-book with you for guidance. I suggest starting with a small amount, like \$10 or £10, to get familiar with the process of buying SPX if it's your first time.

However, buying the token is just the first step. **Building your own conviction** — so that it's not reliant on or dependent on someone else — **should be your next step.**

How to Build Your Own Conviction?

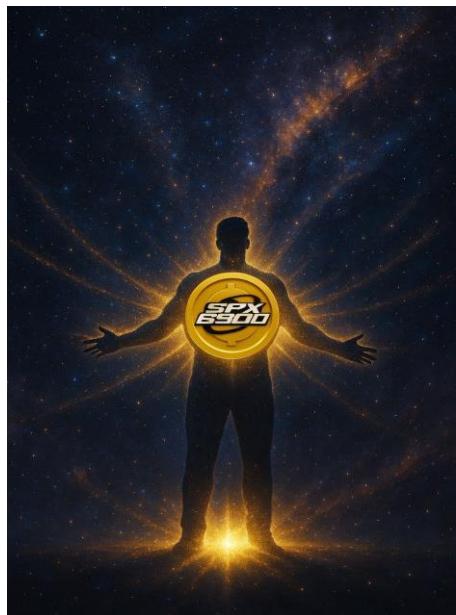

Building conviction may take time. It took me about five months personally, from buying SPX to realizing that this is the community I need to focus on and invest heavily in, because it's special, unique, philosophical, and unlike anything I've seen in my 12 years in crypto.

Hopefully, this e-book will help speed up your conviction process so it doesn't take that long. But to build your own conviction in SPX6900, you need to study the community and see it for yourself.

You need to **join the movement**.

Even if only as a **silent observer**.

Observe, and you'll learn for yourself that this community is different.

If crypto is ultimately about pockets of different communities all trying to attract attention and retention — then you need to be in the **strongest ones**.

Abandon the **weak ones**.

Time is of the essence. ([Appendix G](#))

Focus your attention, energy, and time on a strong, organically growing, diamond-handed, mission-focused **Pure Belief Asset** like SPX6900 for maximum ROI potential.

Your self-conviction will come from studying the community with your own eyes.

Where to Find the Community?

The SPX6900 community lives online, so following other SPX6900 community members is one of the best ways to get involved.

Create an X account for SPX6900.

Add the magnet and chart symbol to your name

Note: You can find the symbol on [this](#) website.

Then start following [these Aeon accounts](#).

Then simply observe the community and engage.

Gradually you would start building your own conviction the more time you spend within the community and learn about SPX6900.

You can also do the same thing by creating a TikTok account and following [these Aeon accounts](#).

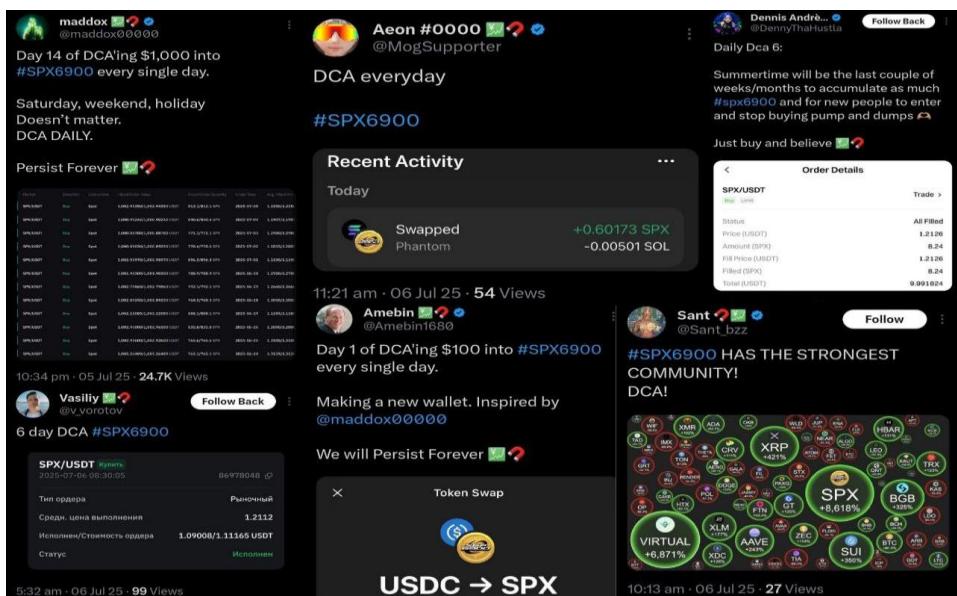

The SPX6900 community also exists on [Reddit](#) and [Telegram](#) too.

Summary Steps:

1. Join the online SPX6900 communities.
2. Follow Aeons.
3. Engage with Aeons.
4. Learn the culture.
5. Practice the culture.
6. Start promoting SPX6900!

Use the Hashtags **\$SPX #SPX6900**.

The Power of Collective Long-term DCA into SPX6900

One of the most fascinating aspects of the SPX6900 community is its ability to take collective action without anyone being in charge. A good idea that could benefit our success might be suggested by an Aeon, and before you know it, Aeons within the community begin to implement and practice it.

I have never seen this level of mass alignment, coordination, and collective action occur within a decentralised crypto community before.

A few examples I've witnessed since becoming part of the community include:

1. Aeons migrating to TikTok, Instagram, and YouTube to promote SPX6900.
2. Aeons creating content that features their face, allowing the audience to connect more deeply with them and the message.
3. A tipping culture where Aeons encourage others to include their SPX address in their social bios so the community can reward each other for their efforts in promoting the project.
4. Last but not least, a daily DCA into SPX6900 — even if it means buying just one token a day collectively.

In this chapter, I want to specifically focus on the benefits of long-term DCA into SPX6900 by the community.

Smooths Out Volatility

When we consistently buy SPX6900 at regular intervals regardless of price, as a long-term strategy, it removes emotional decision-making from the community.

Rather than trying to time the bottom during dips and rallies, averaging your cost over time and staying consistent makes volatile periods easier to endure — because your strategy doesn't change.

Volatility no longer becomes a threat but an advantage, allowing you to secure more tokens without needing to go all in or panic.

No matter when you join the movement, all you need to do is follow your DCA schedule.

This is psychologically easier than market timing or lump-sum investing.

Builds Compounding Conviction

When you see the community regularly committing to DCA into SPX6900 on a large scale, it becomes a powerful display of strength, conviction, and commitment.

This consistent action builds collective trust in the vision and deepens community conviction over time. Even to outsiders, this strategy sends a clear message: **SPX6900 is backed by a community with real belief.**

In crypto, a community that continues to show strength is hard to ignore — **because deep down, you know it's a winning one.**

Creates Sustainable Price Floors

Collective DCA by the community creates constant, regular daily buy pressure.

As this pressure grows, it acts like a safety net under the price — helping sustain floors during dips or crashes triggered by short-term traders and sellers.

This collective DCA strategy also contributes to long-term price appreciation. The price of SPX6900 is influenced by basic supply-and-demand dynamics. Sustained, consistent DCA from Aeons who diamond hand the token leads to higher lows and eventual price climbs.

Dubs 📈🧲🌐
@Dubs_dog

When 1 million people are DCA'ing an average of \$10/day into #SPX6900

That's \$3,650,000,000 in demand every year

Yes your DCA counts, encourage others to do the same. It's entirely a team effort.

Persist forever 📈🧲

4:30 am · 30 Jun 25 · 19.9K Views

We don't have a chart (fortunately), so I can't show you — but a good reference for what this looks like is Bitcoin's chart zoomed out.

Even during bear markets, this strategy strengthens the token's supply dynamics and keeps buy pressure alive.

Grows Token Supply Decentralization

DCA is a powerful way to gradually redistribute the token supply from short-term sellers to committed individuals.

It also gives newcomers the opportunity to join the movement without Fear of Missing Out (FOMO) — allowing them to accumulate over time instead of buying in heavily at higher prices.

Strengthens the Culture

Collective DCA is huge for community culture.

It demonstrates to observers that we are a disciplined, patient, anti-hype, long-term-minded community with high conviction in our mission.

It shows that we are long-term holders — not pump-and-dump speculators.

It's a living example of our PvE nature: we care more about the longevity of the mission and accumulating tokens than about day-to-day price movements.

This type of cultural strength is attractive to outsiders — especially when they see us sharing daily DCA progress and savings goals.

It creates social momentum, making others want to join the strongest community — because in crypto, real wealth is built by investing in the strongest community.

That community is SPX6900.

Final Words

In the words of Satoshi Nakamoto, back when Bitcoin had no real community or market value and was only eight days old:

“It might make sense just to get some in case it catches on.”

— **Satoshi Nakamoto**

This is my advice to you with SPX6900.

The only difference is; we already have a growing community.

Around \$1 billion in market cap.

Around \$1 in price.

But we haven’t flipped the stock market yet.

So, it might make sense just to get some — in case our mission catches on.

Persist Forever, Aeons!

Frequently Asked Questions

1. Where can I learn more or ask questions?

Speak to the person who shared this e-book with you.

Create an X account and start following the [Aeons recommended](#) in this e-book.

Reach out to the community on X, Reddit, or Telegram with your questions.

Go through the "[Further Resources](#)" section in this e-book and watch all the [recommended videos](#).

We are here to help you. You are not alone on this journey!

2. What is market cap?

Market cap stands for market capitalisation — it represents the total value of a cryptocurrency. It is calculated by multiplying the price of a crypto asset by the total number of coins in circulation.

In crypto, market cap is typically used to rank tokens by their overall value. A lower-priced token can still have a larger market cap than a higher-priced token because market cap also depends on the total supply of coins. Don't assume that a token priced at \$0.01 with a trillion coins in circulation is a better investment than a token priced at \$1 with a billion coins, just because of the price per coin.

A low-priced token with a huge supply can still have a large market cap — so always check the market cap, not just the token price, to gauge realistic growth potential.

Large-cap tokens have a market cap over \$10 billion. Mid-cap tokens range between \$1–\$10 billion, and small-cap tokens are under \$1 billion.

3. What is a pump-and-dump rug pull?

A pump-and-dump in crypto is when a group of people buy a cheap low volume token, before hyping it up on socials to try to attract new buyers in order to artificially pump the price of a crypto. They then sell it all at the top (i.e. dump the tokens) on all the new buyers – making big profits, crashing the token

price and leaving everyone else stuck holding worthless tokens losing their money.

A rug pull is similar to a pump-and-dump scheme, but it is executed by the creators of a crypto project. They create a token and retain most of the supply, then hype it up. As people buy in and the price rises, the creators dump all their tokens on the market at once, crashing the price, making the tokens worthless, and disappearing with all the money.

4. What is late-stage capitalism?

Late-stage capitalism is a term used to culturally critique what capitalism has become — hyper-focused on profit at the expense of people. This has led to negative consequences such as extreme wealth inequality, corporate dominance, worker exploitation, hyper-consumerism, and the commodification of everything.

The economy has become purely profit-driven, while regular people suffer and feel left behind. Examples include CEOs earning hundreds of millions while their workers have no

benefits, can't afford rent, need to work multiple jobs, and still struggle financially.

5. Is there a real purpose or utility behind SPX6900?

The utility is the culture and community. Our purpose, goal, and mission are simple – to flip the stock market one holder at a time through collective conviction and belief. This is why SPX6900 is a Pure Belief Asset.

6. Is this just another memecoin?

No, it has evolved from its memecoin origins into something more meaningful and purposeful. SPX6900 is now being taken more seriously as a movement by more people every day. It has far outgrown the label of a memecoin, into a Pure Belief Asset – thanks to the community that invests in it.

7. Who is behind SPX6900?

The community.

The dev left the project at the very beginning, and since then, it has been kept alive by the community. It is now a decentralised, community-driven movement with no single individual having the power to ruin or destroy the mission.

There is no central point of failure with SPX6900.

8. How can I contribute to the movement?

Every SPX6900 believer can contribute in some way. You don't need to be a developer or influencer. If you believe, you belong.

Even if you don't want to take a proactive approach, you can still contribute by:

- Consistent DCA into SPX6900
- Respect the culture and philosophy of the community
- Share this e-book and other promotional SPX6900 materials with people you want to help

Proactive ways to contribute:

- Share your story: Why do you believe in SPX6900?
- Create posts, content, or videos on social media
- Help onboard new members
- Spread awareness of the SPX6900 philosophy and culture
- The more value you bring, the more you strengthen the network.

9. What's with the number 6900?

6900 is just a joke and a playful spin on the 500. The community jokes that the SPX6900 index has 6,400 more S&P's than the S&P 500.

This ultimately — and mathematically — means that **6900 > 500.**

So, when we flip the stock market, it won't be shocking — since it's just math: **6900 is greater than 500.**

10. Isn't this risky?

Every investment carries an element of risk.

SPX6900 is no different. There's no 100% guarantee it will continue to perform well. But we can do our due diligence by studying it, weighing the pros and cons, evaluating the probability of success or failure, and considering the risk/reward ratio — what you stand to gain or lose either way.

However, one thing I do know is that without calculated risk, there is no reward. You have to take a calculated risk on something in life and believe in something if you plan to drastically change your life.

No one is going to save us. We have to save ourselves!

11. What does it mean to be an Aeon?

An Aeon, to me, is a true believer in SPX6900 — someone who embodies and safeguards its culture.

Just like the Bitcoin community has the “Bitcoin Maxis,” who staunchly promote and protect its ideology, SPX6900 has the Aeons.

When I first purchased SPX, I was not an Aeon — just a holder. It took me about five months to build my own self-conviction and truly become an Aeon.

Not every SPX holder is an Aeon, but every Aeon is an SPX holder.

12. How do I know this isn't a scam?

From a token structure standpoint, there's nothing to worry about. The token contract cannot be modified, and no new tokens can be created.

The developer abandoned the project early on, and since then it has been entirely community-driven.

From a technical perspective, there is no person, team, or developer who can scam you. The tokens are all in circulation and fully decentralised.

The growing community and its culture are what give SPX6900 its value.

It comes down to whether you resonate with the culture and see value in being a part of it — or not.

But there's no scam involved.

If you buy SPX, you will receive the tokens at the current market value.

13. How much SPX6900 is enough?

Don't place a limit on how much SPX6900 you can own.

Instead of setting a cap, set a minimum goal you'd like to reach and continue to DCA (Dollar Cost Average) from there.

A good starting point is a minimum target of **1,000 SPX tokens**. Feel free to use the [SPX Token Saving Tracker](#) to help reach that milestone in a fun way.

Capping your SPX holdings limits your long-term potential.

If you just keep DCAing, you might surprise yourself with how much SPX you accumulate over time.

Set a minimum target. Reach it. Then consistently DCA.

14. What is the point of failure of SPX6900?

In my opinion, the only point of failure would be if the community, on a large scale, loses conviction, stops believing, and gives up permanently.

That seems unlikely, given how strong the community is.

What prevents this from happening is the preservation of SPX6900's culture. The culture is designed to protect and grow the community, sustain the token's value, and support long-term growth.

If we don't abandon the culture on a mass scale, the project won't self-degrade or erode.

There's no incentive to abandon the culture — it's the very thing that ensures our community thrives. And that translates to long-term price appreciation.

15. Can I sell my tokens whenever I want?

Yes, you can.

Although the culture encourages buying, holding, and DCAing — because wealth is built from time in the market, not timing the market — and we strongly discourage chart-watching and trading.

However, you are free to sell your tokens at any time.

Everyone has different goals and life situations.

Just be aware: if you post about selling while we're on a mission to flip the stock market, it may be frowned upon. Also, there is a high risk that if you sell out completely, you would regret it – as we continue to appreciate in price.

16. Can I lose my SPX6900?

Yes — if you get hacked or have poor security.

In crypto, if you lose your tokens, it's unlikely you'll get them back.

That's why it's important to learn how to protect your assets.

If you choose to leave them on an exchange, make sure to use every available security feature to prevent your account from being compromised.

If you choose self-custody (which I believe is the best approach), learn how to properly set up your wallet and protect your private keys.

If your keys are compromised, your tokens can be stolen — and there's no recourse.

So, it's critical to understand how to secure your exchange wallet or private keys.

17. Would the price crash when people eventually sell?

Bitcoin didn't reach a trillion-dollar market cap in a straight line from being worth a few cents.

There was a lot of volatility along the way, and Bitcoin was declared "dead" hundreds of times.

Bitcoin didn't rise in a straight line because people sell — and at times, selling pressure exceeds buying pressure, causing

price dips. But eventually, Bitcoin stopped returning to its previous lows. There was a point when it went up to never return back to \$0.10, \$1, \$10, \$100, \$1,000 or even \$10,000. It kept reaching new highs and higher lows.

Zoom out, and you'll see that despite volatility, Bitcoin's long-term trajectory has been upward.

I believe SPX6900 will follow a similar pattern.

There will be people who sell — for whatever reason — even if it's against the culture.

During bear markets, the price may take a hit. But it's the community culture that will protect the token from ever returning to zero, and will help it reach new highs and higher lows.

Even if whales dump their tokens, the community will absorb them through DCA.

This actually benefits decentralization in the long run. No single individual can destroy the project by selling — as long as the culture remains.

The culture is what allows SPX6900 to thrive in bull markets and survive in bear markets.

18. What is the best strategy to invest in SPX6900?

The best strategy, in my opinion, is to use money you can afford to lose — after covering all your expenses.

Most of us waste money monthly. Redirect that money into investing, or consider getting a second job solely for investing purposes.

Invest in SPX6900 using the Dollar Cost Averaging (DCA) method.

DCA means investing a fixed amount regularly (weekly, monthly, etc.) regardless of the token's price.

This strategy averages out your cost per token and reduces the risk of investing a large sum at the wrong time. DCA is ideal for long-term investing — and SPX6900 is a multi-cycle long-term mission.

19. The volatility scares me – what should I do?

This is exactly why we don't watch charts — we focus on conviction instead.

First, stop chart-watching.

Then, study SPX6900 and build your long-term conviction in the thesis and culture.

Finally, DCA into the volatility.

20. Isn't the SPX6900 mission delusional?

Yes — it's outrageously delusional.

How dare we even think our tiny token, SPX6900, can flip the behemoth stock market?!

But we do.

There's nothing wrong with having a high-conviction, "delusional" belief when investing in a Pure Belief Asset with a mountain-sized mission.

Delusion is our asset.

It's always a laughing matter for the skeptics — until it's not.

21. Am I too late, now?

People are going to hear about SPX6900, and join the movement at different points along our journey to flipping the stock market.

The same phenomenon happened with Bitcoin. Not everyone got in below \$1, \$10, \$100, \$1,000, or \$10,000 — but in the grand scheme of things, they weren't late, as Bitcoin surpassed all those values.

With SPX6900, it's very easy to gauge whether you're late or not: Have we flipped the stock market yet and reached a \$69 trillion market cap? If not, then you're not late.

DCA those tiny coins and start accumulating.

22. I just don't get SPX6900, why?

Personally, I would buy some — just in case you get it later.

I didn't understand Bitcoin when I discovered it in 2013, but I understood it in 2019. If I had bought some back then, I would have benefitted immensely from that earlier purchase.

The reason I didn't understand Bitcoin in 2013 was because I didn't study it — until 2019.

This is why, throughout this e-book, I emphasize the importance of **studying SPX6900**. It's the only way to truly understand it and build your own conviction, rather than relying on borrowed conviction.

This e-book is a guide to help you, and shorten your learning curve, but the only way to truly study SPX6900 and build your own conviction is by observing the community — their conviction, and how they implement the culture.

Remember, SPX is just a token. What gives the token value is the community — so study the people within the community and their conviction to understand SPX6900.

Study SPX6900.

Appendix E: Cryptocurrencies Growth Charts

(Fig 1.11 – Estimated Growth of Cryptocurrencies since 2009)

The number of cryptocurrencies created is actually far greater than what is shown in Fig. 1.11, as it only estimates cryptocurrencies listed on tracking sites like [CoinMarketCap](#) and [CoinGecko](#). It does not account for the thousands of tokens created daily through launchpads — often without any coding skills required — which are traded on decentralised exchanges (DEXs).

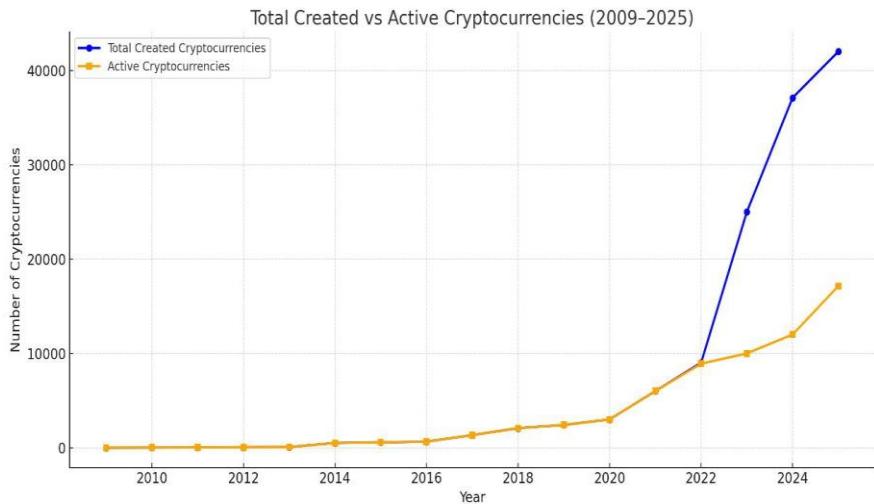

The reason the number of cryptocurrencies appears to drop from over 35,000 to 17,000 is not because fewer tokens are being created, but rather because many are delisted from these tracking sites after being considered inactive.

This drop is typically due to tokens dying off — whether from rug pulls, abandoned projects (common with many utility tokens), scams, or other reasons — which inevitably leads to zero trading volume.

Keep in mind, this data doesn't even include all the dead crypto tokens that were never listed on tracking sites but existed only on DEXs.

The dip simply highlights the high mortality rate of crypto projects and illustrates how easy it is to create a token — but how difficult it is to replicate community. As a result, many tokens fail to survive even a single market cycle.

This is why community strength and culture are rare, and why a community like SPX6900 is so special, unique, and important within the crypto space.

(Fig 1.12 – Total Created vs Active Cryptocurrencies Since 2009)

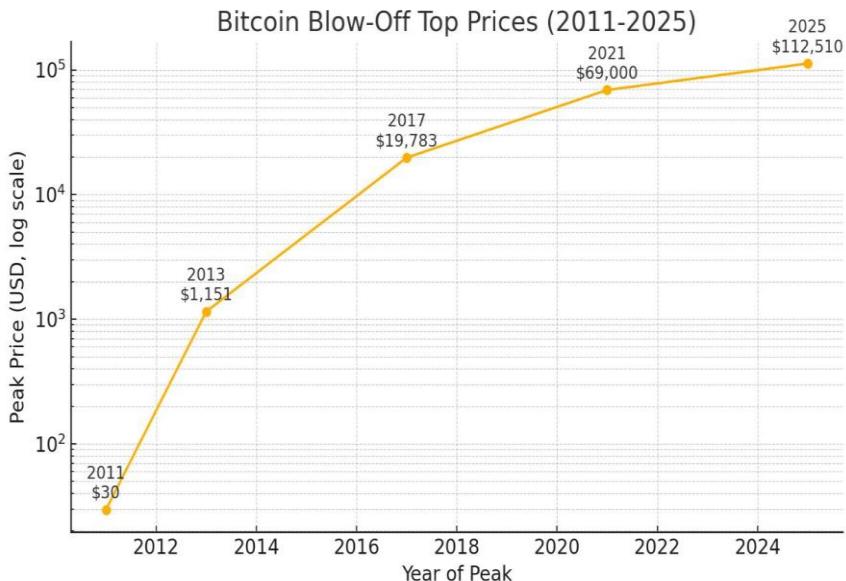

Fig. 1.12 is a dual-line chart illustrating the total number of cryptocurrencies created versus those that remain actively listed on tracking sites. The blue line represents the total created, while the orange line shows the actively listed coins.

The total number of cryptocurrency launches continues to grow, whereas the number of actively listed coins grows more slowly and may decline as dead projects are delisted.

Appendix G: Understanding Crypto Bull Cycles

(Fig 2.1 – Bitcoin Peak Bull Cycle Prices)

Since the inception of Bitcoin in 2009, there have been several major crypto bull cycles. Bull cycles are periods during which the market goes parabolic, with Bitcoin reaching new all-time highs followed by the altcoin market.

Market cycles usually follow this pattern:

Bitcoin halving → Bull market → Peak → Crash → Bear market → Accumulation era → Repeat

Approximately every four years, the rewards that Bitcoin miners earn for running hardware that verifies Bitcoin transactions are cut in half. This event is known as the Bitcoin halving.

The bull market has historically followed the Bitcoin halving event (Fig. 2.1):

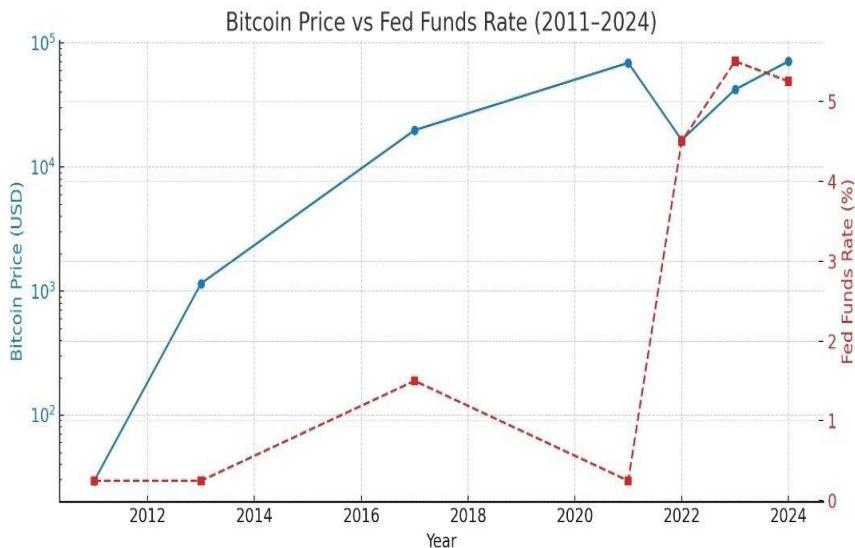

- Bitcoin halving occurred in 2012, followed by a bull market in 2013 where Bitcoin reached over \$1,000, followed by an 85% crash.
- Bitcoin halving occurred in 2016, followed by a bull market in 2017 where Bitcoin peaked near \$20,000, followed by a crash to \$3,000.
- Bitcoin halving occurred in 2020, followed by a bull market in 2021 where Bitcoin reached an all-time high near \$69,000, followed by a crash to around \$17,000.

- Bitcoin also had a halving in 2024, and we are now in 2025, where Bitcoin (as of 10th July 2025) has so far reached an all-time high of \$113,804, with the bull cycle still in progress (Fig. 2.2).

(Fig 2.2 – Michael Saylor Calls \$440,000 Bitcoin in 2025)

The main catalyst behind these bull cycles isn't the Bitcoin halving event itself, but rather the low interest rates and high liquidity resulting from loose monetary policy, which shape the risk appetite of the entire market (Fig. 2.3).

(Fig 2.3 – Bitcoin Price vs Fed Interest Rates)

In Fig. 2.3, you can see that the Fed interest rates were close to 0% in 2013 and 2021, during which Bitcoin reached over \$1,000 and \$69,000, respectively. In 2017, rates were still relatively low, despite increasing from 0.5% to 1.5%, with

Bitcoin reaching nearly \$20,000. Even though current Fed rates are high — around 4.50% — there is growing speculation about potential easing and a pivot toward rate cuts. The expectation of rate cuts can still drive crypto upward, which may explain why Bitcoin is still performing well.

Bitcoin and crypto in general are liquidity-sensitive assets. They thrive during periods of low or falling interest rates, as investors seek riskier alternatives to hedge against fiat currency devaluation.

This money tends to flow into Bitcoin, pushing its value up, and then rotates into the altcoin market — offering much higher returns on investment. This phenomenon is known as “altseason” (Fig. 2.4).

(Fig 2.4 – Altseason bull runs)

In the 2025 crypto bull cycle, it is anticipated that memecoins will drastically outperform all other cryptocurrencies (Fig. 2.5). This phenomenon is known as a memecoin supercycle, where liquidity, hype, FOMO, and speculation drive memecoin prices significantly higher, causing them to outperform the rest of the market. However, only a select few

memecoins are expected to experience substantial gains — not all of them.

(Fig 2.5 – Memecoin Supercycle Prediction)

SPX6900 is a pure belief asset, categorized as a memecoin, that is expected to perform exceptionally well in a memecoin supercycle. This is due to its culture, strong community, and clear mission. However, 99% of memecoins will eventually crash or become worthless.

This is not to say that SPX6900 won't correct sharply after a blow-off top and a broader market downturn, including Bitcoin. SPX6900 would also be expected to correct with the market. However, it will likely hold up better than 99% of memecoins if we enter a multi-year bear market.

This resilience is due to SPX6900 being a multi-cycle asset backed by a mission and a strong community culture. So, during the bear cycle — while most memecoins cease to exist and fade away — SPX6900 will likely reach a higher low and consolidate, as the community continues to accumulate it long-term, gearing toward the next blow-off top. This is similar to how Bitcoin has performed in Fig. 2.1, reaching higher highs over time.

I expect a similar performance from the pure belief asset SPX6900 in the long run — **thriving through bull cycles and surviving bear markets.**

Appendix H: SPX6900 Newcomer's Checklist

❖ SPX6900 Newcomer's Checklist

“No one is coming to save us. We have to save ourselves.”

1. Get Oriented

- Q** Read this entire e-book thoroughly.
- Understand what SPX6900 is: A **Pure Belief Asset** built on community, conviction, and culture.
- Know the mission: **Flip the stock market, one holder at a time.**

2. Join the Movement

-  Speak to the person who shared this e-book with you.
-  Create an **X (Twitter)** account and follow the [Aeons recommended in this e-book](#).
-  Join the community on **Telegram, Reddit, and X**. Ask questions. Engage. Learn.

3. Do Your Own Research (DYOR)

-  Watch all the recommended videos in the “[Further Resources](#)” section.
-  Understand the risks and rewards. Study the tokenomics, community conviction, and culture.
-  Accept the volatility, embrace the long-term vision.

4. Protect Yourself

-  Learn crypto security basics.
- Decide between exchange custody or self-custody (recommended).
-  If self-custody: Set up a secure wallet, back up your seed phrase, and protect your private keys.

5. Start Accumulating

-  Begin **Dollar Cost Averaging (DCA)** into SPX6900 using money you can afford to lose.
-  Set a **minimum target** (e.g., 1,000 SPX) and use the [SPX Token Saving Tracker](#) to reach it.
-  Be consistent. Time in the market > timing the market.

6. Become a Contributor

-  Share your belief, story, or why SPX6900 matters to you.

-  Create content, posts, or videos to spread the message.
- Help onboard new members and answer questions.
-  Respect and promote the culture — it's what sustains and grows the movement.

7. Stay Focused

-  Avoid chart-watching and trading.
-  Trust the culture and the community.
-  Think long-term. Conviction compounds over time.

8. Remember the Philosophy

-  “Stop Trading, and Believe in Something.”
-  The utility is the community culture and conviction of the holders.
-  SPX6900 survives and thrives because of **you**, not because of a dev or team.

Acknowledgements

I want to express my gratitude to the individuals and community that helped shape not only this e-book, but also my conviction in what SPX6900 truly represents.

To Chiron and Raiden, thank you for your help in reviewing this e-book and for providing invaluable feedback.

To Murad, your insights and clarity on meme token investing were a revelation. Your ability to cut through the noise and articulate the underlying value proposition of memecoins gave me the perspective I had been missing all these years. Your work helped me understand that sometimes, the most powerful investments aren't built on products, but on people and conviction.

To all the Aeons in the SPX6900 community — thank you. Your relentless energy, creativity, and consistency in spreading the message across social platforms and even in real life has been nothing short of inspiring. Watching you work tirelessly “for your bag” isn’t just about gains — it’s

about grassroots conviction, and a movement fuelled by belief.

This e-book is just one small contribution to the larger wave you are all building every single day.

With respect,

— *Audacious*

About the Author

I'm not a financial advisor. I'm not an influencer. I'm just someone who's lived through two crypto cycles, made the mistakes, and learned the hard way how to navigate this market.

I discovered Bitcoin in 2013 but, out of ignorance, ignored it in favour of altcoins. I thought I was too late — Bitcoin was already in the triple digits — so I chased what I believed were “undervalued” alternatives. I spent years placing my conviction in long-term altcoin projects built around utility narratives that depended on teams or companies delivering on promises made in their whitepapers, with the hope of market adoption to follow.

Although I did find some early success with certain picks, the vast majority failed. Most teams didn't deliver on their roadmaps, and even when they did, the projects rarely achieved meaningful adoption. I came to realize that the only real force holding up these token prices was speculation — communities hoping one day the utility would matter.

Over time, I witnessed first-hand the rise and fall of these utility tokens. I saw communities dissolve, charts collapse, and portfolios with them, as it became clear that the product would never arrive or gain traction. I even discovered SHIB early — but ignored it, dismissing it as a memecoin with no utility. Another mistake.

What I failed to grasp throughout most of my journey was this: utility wasn't the value. The community was.

In 2024, I turned my attention to memecoins — not as a joke or trend, but as a serious, evolving force in crypto. Like many, I began by trenching — buying low-cap tokens hoping for quick wins. I only lost money for the most part doing this.

Then I came across Murad's thesis on memecoins, and it resonated deeply. Years of experience in utility altcoins and low-cap memecoin speculation had prepared me for that clarity: the future belongs to high-conviction, growing communities. That clarity led me to SPX6900.

SPX6900 hit differently. After hours spent researching, reflecting, and listening to the voices within the community, I saw something unique. Something powerful. Something

that reminded me of the early days of Bitcoin — only this time, I paid attention.

This e-book is the result of countless hours immersed in the SPX6900 community. It's not financial advice — it's a philosophical blueprint where **belief is the value**, and **community is the utility**.

This e-book isn't about shilling a token. It's about something deeper: the power of people coming together under a shared conviction. And right now, SPX6900 is one of the most important expressions of that energy.

I wrote this as a manifesto — for those who are done trading, done waiting for teams to deliver utility, and finally ready to **start believing**.

NO ONE IS COMING TO SAVE YOU.

WE ARE TRYING TO HELP YOU.

STUDY SPX6900.

TIME IS OF THE ESSENCE!

**THE STOCK MARKET HAD ITS RUN.
NOW IT'S OUR TURN.**
